When Performance Counts.
Quand la performance compte.
Cuando el rendimiento cuenta.

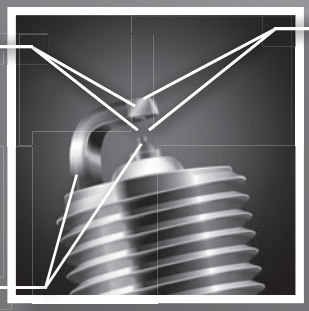

Champion® Iridium

Patented iridium center and platinum ground electrodes ensure maximum life.

Électrode centrale en iridium et électrode de masse en platine brevetées qui assurent une durée de vie maximale.

Electrodos central de iridio y de tierra de platino patentados que aseguran la máxima duración.

Fine-wire center electrode and V-trimmed ground produces sharpest spark focus.

Électrode centrale fine et électrode de masse en V offrant une concentration optimale de l'étincelle.

Electrodo central de alambre fino y tierra recortada en V que produce la concentración más precisa de la chispa.

Exclusive Heat-Active™ alloy maintains stable operating temperature under all engine loads.

Alliage exclusif Heat-Active™ qui maintient une température de fonctionnement stable, peu importe la charge du moteur.

La aleación exclusiva Heat-Active™ mantiene una temperatura de operación estable en todas las cargas de motor.

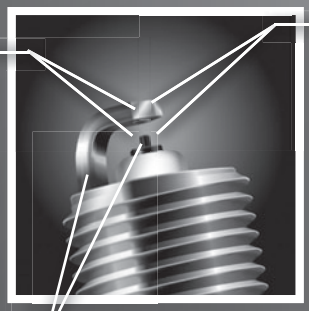

Double Platinum Power™

Patented center and ground electrodes. Uses proprietary ground electrode weld process to ensure longer life.

Électrodes centrale et de masse brevetées. Électrode de masse soudée au moyen d'un procédé exclusif qui lui assure une durée de vie accrue.

Electrodos central y de tierra patentados. Usa un proceso de soldadura de electrodo de tierra propietario para asegurar la máxima duración.

Fine-wire center electrode and V-trimmed ground produce sharper spark focus.

Électrode centrale fine et électrode de masse en V qui produisent une meilleure concentration de l'étincelle.

Electrodo central de alambre fino y tierra recortado en V que producen una concentración precisa de la chispa.

Exclusive Heat-Active™ alloy maintains stable operating temperature under all engine loads.

Alliage exclusif Heat-Active™ qui maintient une température de fonctionnement stable, peu importe la charge du moteur.

La aleación exclusiva Heat-Active™ mantiene una temperatura de operación estable en todas las cargas de motor.

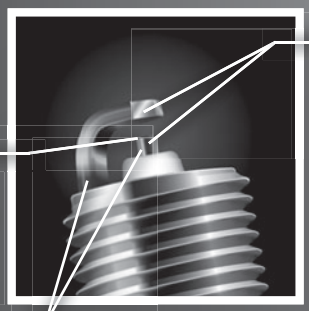

Platinum Power™

Patented center electrode for long life.

Électrode centrale brevetée offrant une longue durée de vie.

Electrodo central patentado de larga duración.

Thin-wire center electrode and V-trimmed ground produce sharp spark focus.

Électrode centrale fine et électrode de masse en V qui concentrent l'étincelle.

Electrodo central de alambre fino y tierra recortada en V que producen una concentración precisa de la chispa.

Exclusive Heat-Active™ alloy maintains stable operating temperature under all engine loads.

Alliage exclusif Heat-Active™ qui maintient une température de fonctionnement stable, peu importe la charge du moteur.

La aleación exclusiva Heat-Active™ mantiene una temperatura de operación estable en todas las cargas de motor.

FEDERAL-MOGUL MOTORPARTS

APPLICATIONS / APPLICATIONS / APLICACIONES

Automobiles, Vans, Trucks
Voitures, fourgonnettes et camions
Automóviles, furgonetas, camiones 1

Medium Duty Truck
Camions semi-lourds
Camiones semi-pesados 341

Vintage Automobiles 1966 & Older
Voitures anciennes 1920-1966
Automóviles más antiguos de 1920-1966 355

Vintage Trucks And Buses 1966 & Older
Camions et autobus anciens 1920-1966
Camiones y autobuses más antiguos de 1920-1966 362

ATV
VTT
Vehículos para todo terreno 365

Golf Carts / Go Karts
Voiturettes de golf / Voiturettes de cart
Carritos de golf / Carritos de cart 374

Mopeds
Cyclomoteurs
Motocicletas 377

Motorcycles, Minibikes, etc.
Motocyclettes, Mini-motos, etc.
Motos, Minimotos, etc. 386

Snowmobiles
Motoneiges
Trineos motorizados 444

Marine Engines - Inboard - Stern Drive
Moteurs de bateaux-en-bord-semi-hors-bord
Motores marinos-a bordo-impulsión a popa 465

Marine Engines - Outboard
Moteurs de bateaux-hors-bord
Motores marinos-fuera borda 495

Marine Engines - Personal Watercraft
Motomarines
Vehículos acuáticos personales 544

Marine Engines - Jetboats
Bateaux à réaction
Embarcaciones a chorro 548

Lawn & Garden Equipment
Bougies pour petits moteurs
Motores de césped y jardín 554

Chainsaws
Scies à chaîne
Sierras de cadenas 665

Snow Removal Equipment
Équipement De Déneignement
Equipos Quitanieves 676

Lighting Plants & Generators
Groupes d'éclairage et générateurs
Plantas de iluminación y generadores 683

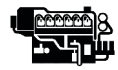

Pumps, Compressors & Refrigeration Units
Pompes, compresseurs et unités de réfrigération
Bombas, compresores y unidades de refrigeración 696

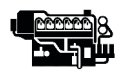

Power Equipment Engines
Moteurs d'équipement motorisé
Motores de equipos 715

Farm Tractors & Machinery
Tracteurs et machinerie agricoles
Tractores y maquinaria agrícola 735

Industrial Tractors & Lift Trucks
Tracteurs et chariots élévateurs industriels
Tractores y montacargas industriales 745

Road Construction Machinery
Équipement de construction routière
Maquinaria para la construcción de carreteras 760

Commercial, Stationary, & Gas Engine Applications
Moteurs commerciaux, stationnaires et à essence
Motores comerciales, fijos y de gasolina 792

Commercial, Stationary, & Gas Engine Applications - 5/8"-24
Moteurs commerciaux, stationnaires et à essence - 5/8"-24
Motores comerciales, fijos y de gasolina - 5/8"-24" 820

RE14PMPB

Automotive Spark Plug Example

- **R** Resistor
- **E** M14 x 1.25 thread, .984" thread reach, tapered seat, 5/8" hex
- **14** Heat range (Automotive & Small Engine)
- **P** Contains platinum in the center electrode
- **M** 0.0100 to 0.140" core projection
- **P** Contains platinum in the ground electrode
- **B** Fine wire rivet design (**Special design feature**)
- **(_)** No special gap dimension indicated - Follow the plug manufacturer's recommended gap setting when installing the spark plug

Exemple d'une bougie d'automobile

- **R** Résistance
- **E** Filetage M14 x 1,25, portée des filets 0,984 po, siège conique, écrou hex 5/8 po
- **14** Gamme de chaleur (automobiles et petits moteurs)
- **P** Électrode centrale contenant du platine
- **M** Projection de l'axe de 0,0100 po à 0,140 po
- **P** Électrode de masse contenant du platine
- **B** Modèle riveté à pointe fine (**Caractéristique spéciale**)
- **(_)** Aucune dimension spéciale d'écartement n'est indiquée – observer le réglage d'écartement recommandé par le fabricant au moment d'installer les bougies

Ejemplo de bujía automotriz

- **R** Resistor
- **E** Rosca M14 x 1.25, tramo roscado de 0.984", asiento cónico, tuerca hexagonal 5/8"
- **14** Gama de temperaturas (automotrices y motores pequeños)
- **P** Contiene platino en el electrodo central
- **M** Proyección del núcleo de 0.0100 to a 0.140"
- **P** Contiene platino en el electrodo de tierra
- **B** Diseño de remache de alambre fino (**característica de diseño especial**)
- **(_)** No se indica una dimensión especial de separación entre electrodos – Siga el ajuste de separación entre electrodos recomendado del fabricante al instalar la bujía

R

RESISTOR / RÉSISTANCE / RESISTOR

*	Description / Description / Descripción
R	Resistor / Résistance / Resistor - 3k ohm / 10k ohm
K	Resistor / Résistance / Resistor - 1k - 2k ohm
T	Resistor / Résistance / Resistor - 7k - 15k ohm
Q	Low resistance, inductive supressor Antiparasite à faible résistance inductive Baja resistencia, supresor inductor
X	Combined resistive / inductive suppression Antiparasite combiné à résistance résistive / inductive Supresión resistiva / inductora combinada
U	Internal auxillary air gap (Booster Gap) Entrefer auxiliaire interne (écartement survolté) Entrehierro auxiliar interno (separación auxiliar)

If the very first character listed in the plug type number is NOT one of the characters listed above, the plug is a non-resistor type (Does not contain a resistor).

Si le tout premier caractère du numéro de type de bougie N'EST PAS l'un de ceux figurant ci-dessus, la bougie est de type sans résistance (elle ne contient pas de résistance).

Si el primer carácter indicado en el número del tipo de bujía NO es uno de los caracteres indicados arriba, la bujía es del tipo sin resistor (no contiene un resistor).

E

L	M14x1.25	0.500"	Gasket / Joint d'étanchéité/ Junta	13/16"
N	M14x1.25	0.750"	Gasket / Joint d'étanchéité/ Junta	13/16"
P	M12x1.25	0.500"	Gasket / Joint d'étanchéité/ Junta	11/16"
S	M14x1.25	0.689"	Taper / Conique / Cónico	5/8"
V	M14x1.25	0.441"	Taper / Conique / Cónico	5/8"
Y	M10x1.0	0.375"	Gasket / Joint d'étanchéité/ Junta	5/8"
Z	M10x1.0	0.500"	Gasket / Joint d'étanchéité/ Junta	5/8"

The tabulated values generally hold true for the more common plug types. There may be minor variations from the tabulated values for the less common plug types.

Les valeurs contenues dans le tableau sont généralement valables pour les types de bougie les plus courants. Ces valeurs peuvent varier très légèrement dans le cas de bougies de type moins courant.

Los valores tabulados generalmente son ciertos para los tipos de bujías más comunes. Puede haber pequeñas variaciones con respecto a los valores tabulados para los tipos de bujías menos comunes.

14

HEAT RANGE / APPLICATION
GAMME DE CHALEUR / APPLICATION
GAMA DE TEMPERATURAS / APLICACIONES

HR	Application / Application / Aplicación
1-20	Automotive & Small Engine Automobiles, petits moteur Automotriz, motores pequeños
20-49	Historically Aviation Historiquement, aviation Aviación histórica
50-65	Hi Performance Racing Plugs Bougies haute performance pour la course Bujías de competición de alto rendimiento
65-100	Industrial & Small Engine Équipement industriel et petits moteurs Industriales y motores pequeños

Please note, within a given plug family the plugs run hotter as the number gets higher. Generally, the Racing and Industrial plug families run colder than automotive plug family even though they have higher numbers.

Il faut noter que dans une même famille de bougies, plus le chiffre est élevé, plus la bougie devient chaude. En général, les familles de bougies de course et d'équipement industriel restent plus froides que les bougies d'automobiles, même si leurs chiffres sont élevés.

Observe que en una familia de bujías dada, las bujías funcionan a mayor temperatura a medida que aumenta el número. Por lo general, las familias de bujías de competición e industriales funcionan a temperaturas más frías que las de la familia de bujías automotrices aun cuando tengan números más altos.

SPECIAL DESIGN FEATURE(S)
CARACTÉRISTIQUES SPÉCIALES
SPECIAL DESIGN FEATURE(S)

Description / Description / Descripción	
Z	Skirted Plug / Bougie chemisée / Bujía con falda
LM	Lawn Mower Plug / Bougie de tondeuse à gazon / Bujía de cortacéspedes
V	Surface Gap / Écartement de surface / Bujía superficial
B	Fine Wire Rivet Design / Modèle riveté à pointe fine / Diseño de remache de alambre fino

On a skirted shell, the threads on the metal shell STOP before they reach the bottom. Non-skirted plugs have threads all the way to the bottom of the shell.
***Some plugs have special design features. If the first character after the heat range (number) is **NOT** one of the center electrode references, check the Special Features matrix.*

Sur un culot chemisé, les filets du culot en métal S'ARRÊTENT avant d'atteindre le bas. Sur les bougies chemisées, les filets se prolongent jusqu'au bas du culot.
***Certaines bougies sont dotées de caractéristiques spéciales en fonction de leur conception. Si le premier caractère suivant celui de la gamme de chaleur N'EST PAS l'un de ceux des références de l'électrode centrale, consulter le tableau des caractéristiques spéciales.*

En una cubierta con falda, las roscas de la cubierta de metal se DETIENEN antes de llegar al fondo. Las bujías sin falda tienen roscas hasta el fondo de la cubierta.
*** Algunas bujías tienen características de diseño especiales. Si el primer carácter después de la gama térmica (número) NO es una de las referencias del electrodo central, compruebe la matriz de características especiales.*

DOMESTIC VEHICLE IDENTIFICATION NO. (VIN) LOCATION

- Engine codes are designed to give positive identification of the engine in the vehicle.
- Location and information for engine identification varies with models and years and refers only to the engine originally installed.
- To insure correct spark plug application check as illustrated to determine the engine code.
- Refer to the catalog column heading Engine/VIN Code to determine spark plug recommendations.

NOTE: Both alphabetical and numerical characters refer to digits.

EMPLACEMENT DU NUMÉRO D'IDENTIFICATION (NIV) DES VÉHICULES NORD-AMÉRICAINS

- Les numéros de code du moteur ont pour but d'assurer l'identification exacte du moteur du véhicule.
- L'emplacement de l'identification du moteur et les renseignements qu'elle donne varient suivant le modèle et l'année et désignent uniquement le moteur installé à l'origine.
- Pour assurer l'installation des bougies qu'il faut, faire les vérifications conformes à l'illustration pour déterminer le code du moteur.
- Se référer à la colonne du catalogue intitulée Moteur/Code NIV pour déterminer les recommandations en fait de bougies.

NOTE : Les numéros comprennent aussi bien des caractères alphabétiques que des caractères numériques.

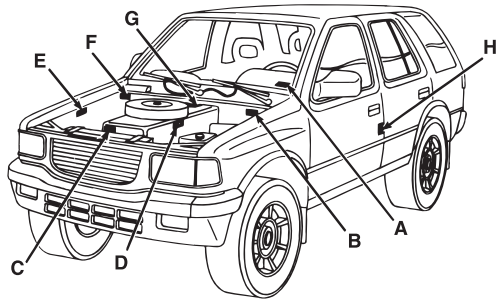

UBICACIÓN DEL NO. DE IDENTIFICACIÓN DEL MOTOR NACIONAL

- Los códigos del motor están diseñados para dar una identificación positiva del motor en el vehículo.
- La ubicación e información para la identificación del motor var a con los vehículos y años y se refiere solamente al motor instalado originalmente.
- Para asegurar la aplicación correcta de la bujía, compruebe según se indica, para determinar el código del motor.
- Consulte el encabezado de la columna del catálogo Código del motor/VIN para determinar las recomendaciones de las bujía.

NOTA: Tantos los caracteres alfabéticos como numéricos se refieren a dígitos.

IMPORT VEHICLE IDENTIFICATION NO. (VIN) LOCATION

A. Inside unit on left side.
B. Upper left corner of fire wall.
C. Stamped on front of engine near fuel pump.
D. Stamped on left or right top side of engine block.
E. Right front wheel house.
F. Upper right corner of fire wall.
G. Top of engine block at rear center between cylinders.
H. Lock face of left front door.

EMPLACEMENT DU NUMÉRO D'IDENTIFICATION (NIV) DES VÉHICULES IMPORTÉS

A. L'intérieur du véhicule, du côté gauche.
B. Dans le coin supérieur gauche de la cloison pare-feu.
C. Estampillé sur le devant du moteur, près de la pompe à carburant.
D. Estampillé sur le côté supérieur gauche ou droit du bloc moteur.
E. Dans le logement de la roue avant droite.
F. Dans le coin supérieur droit de la cloison pare-feu.
G. En haut du bloc moteur, au milieu de l'arrière, entre les cylindres.
H. Sur la têtière de serrure de la porte avant gauche.

UBICACIÓN DEL NO. DE IDENTIFICACIÓN DEL VEHÍCULO (VIN) DE IMPORTACIÓN

A. Dentro de la unidad, en el lado izquierdo.
B. Esquina superior izquierda del parafuegos
C. Estampada en la parte delantera del motor cerca de la bomba de combustible.
D. Estampada en el lado superior derecho o izquierdo del bloque del motor.
E. Cubrerruedas delantero derecho
F. Esquina superior derecha del parafuegos
G. Parte superior del bloque del motor en la parte central trasera entre cilindros.
H. Superficie de la cerradura de la puerta delantera izquierda.

SPARK PLUG REMOVAL AND INSTALLATION

After the normal service life of a spark plug, one or more of the plugs may be a little difficult to loosen. Allowing the engine ample cool-down time will facilitate plug removal. The use of penetrating oil is also recommended if the plug appears to be dangerously tight. Apply steady pressure with a plug wrench until the plug loosens. Before removing the plug, blow any dirt from the port area that might be present to prevent it from falling into the combustion chamber. If the plug appeared to be overly tight when removed by hand, it may be due to carbon collection in the threaded area of the cylinder head. This condition is common in older engines. The threads should be cleaned with a chaser tool, and the seat wiped clean to assure good seat contact before installing a new plug.

Use the Champion torque recommendation below as a guide for tightening all spark plugs.

DÉPOSE ET POSE DES BOUGIES

Après une durée normale de service, il est possible qu'une ou plusieurs bougies soient difficiles à desserrer. Laisser le moteur se refroidir suffisamment peut alors faciliter la dépose des bougies. L'utilisation d'une huile pénétrante est également recommandée si la bougie semble dangereusement serrée. Appliquer une pression constante avec une clé à bougie jusqu'à ce que la bougie se desserre. Avant de la retirer, enlever toute trace de saleté autour de son orifice pour empêcher qu'elle ne contamine la chambre de combustion. Si une bougie enlevée à la main semblait trop serrée, il est possible qu'il y ait un dépôt de carbone dans le filetage du couvercle de culasse. Ce problème est commun sur les anciens modèles de moteur. Le filetage doit alors être nettoyé à l'aide d'une filière, et le siège doit être essuyé avec soin pour lui assurer un bon contact avant d'installer une nouvelle bougie.

Utiliser le guide de serrage Champion ci-dessous recommandé pour toutes les bougies Champion.

DESMONTAJE E INSTALACIÓN DE BUJÍAS

Después de la duración de servicio normal de una bujía, es posible que sea difícil aflojar una o más bujías. Se debe dejar que el motor se enfríe durante un largo tiempo para facilitar el desmontaje de las bujías. También se recomienda usar aceite penetrante si la bujía parece estar peligrosamente apretada. Ejerza una presión constante con una llave para bujías hasta que se afloje la bujía. Antes de quitar la bujía, limpie la suciedad que pueda estar presente en el área del orificio para impedir que entre en la cámara de combustión. Si la bujía parece estar demasiado apretada cuando se quita con la mano, puede deberse a la acumulación de carbón en el área roscada de la cabeza del cilindro. Esto es común en los motores más antiguos. Se deben limpiar las roscas con un peine de roscar, y el asiento debe limpiarse para asegurar un buen contacto antes de instalar una bujía nueva.

Use la siguiente recomendación de apriete de Champion como guía para apretar todas las bujías.

TAPERED SEAT PLUGS
BOUGIES À SIÈGE CONIQUE
BUJÍAS DE ASIENTO CÓNICO

Finger Tight. Install the new plug finger tight, and complete the installation with a plug wrench.

Serrer avec les doigts. Installer les nouvelles bougies à la main, puis compléter l'installation à l'aide d'une clé pour bougie.

Apretada a mano. Instale la nueva bujía apretándola con la mano, y complete la instalación con una llave para bujías.

Turn Finger Tight. A tapered seat plug does not use gaskets and requires about one-sixteenth (1/16) turn.

Serrer avec les doigts. Une bougie à siège conique ne comporte pas de joints et nécessite environ 1/16 de tour.

Giro con la mano. Las bujías cónicas no usan empaquetaduras y requieren aproximadamente un dieciseisavo (1/16) de vuelta.

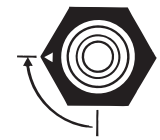

GASKET TYPE PLUGS
BOUGIES DE TYPE À JOINT
BUJÍAS TIPO EMPAQUETADURA

Turn Finger Tight. A new or reinstalled plug with a **new gasket** will require 3/8–5/8 turn to effect a gas tight seal depending on head material. (See below.)

Serrer avec les doigts. Une bougie neuve ou réinstallée avec un nouveau joint nécessitera 3/8-5/8 de tour pour composer un joint de gaz étanche, selon le matériau de la culasse (voir ci-dessous).

Giro con la mano. Una bujía nueva o vuelta a instalar con una empaquetadura nueva requiere de 1/4 a 5/8 de vuelta para lograr una estanqueidad al gas dependiendo del material de la cabeza. (Vea abajo).

1/4 Turn Finger Tight. For reinstalled plugs with **used gasket** ONLY a 1/4 turn is required for gas tight seal for both cast iron and aluminum.

Serrer avec les doigts. Pour les bougies réinstallées avec le vieux joint, SEULEMENT 1/4 de tour est requis pour composer un joint de gaz étanche, autant pour la fonte moulée que pour l'aluminium.

Giro con la mano de 1/4 de vuelta.
Para bujías vueltas a instalar con empaquetadura usada SÓLAMENTE se requiere 1/4 de vuelta para lograr una estanqueidad al gas para hierro colado y aluminio.

GAPPING FINE WIRE SPARK PLUGS
ÉCARTEMENT DES BOUGIES À FIL FIN
DETERMINACIÓN DE LA SEPARACIÓN ENTRE PUNTAS DE BUJÍAS DE FILAMENTOS

Most Champion Iridium and Double Platinum plugs are equipped with fine-wire technology. Fine-wire electrodes help to concentrate the electrical field between the two electrodes, allowing the plug to achieve the greatest performance.

Although all Champion plugs are gapped at the factory there may be the need to adjust gap slightly for your engine. Gapping of fine-wire plugs should always be performed by adjusting the ground electrode without contacting the center electrode.

Bending or prying the ground electrode while in contact with the precious metal can damage the spark plug, resulting in compromised performance and life.

When adjusting the ground electrode, use a gapping tool with a ground electrode adjustment tool (pictured) or a pair of needle-nose pliers.

La plupart des bougies Double Platinum Champion sont dotées de la technologie des électrodes à fil fin. Les électrodes à fil fin aident à concentrer le champ électrique entre les deux électrodes, permettant ainsi à la bougie d'offrir une performance optimale.

Bien que l'écartement de toutes les bougies Champion soit réglé en usine, il peut être nécessaire de l'ajuster légèrement pour votre moteur. Le réglage de l'écartement des bougies à fil fin doit toujours être réalisé en prenant soin d'ajuster l'électrode de masse en évitant qu'elle entre en contact avec l'électrode centrale.

Le fait de courber ou d'écarter l'électrode de masse tandis qu'elle est en contact avec le métal précieux peut endommager la bougie, compromettant ainsi sa performance et sa durée de vie.

Pour ajuster l'électrode de masse, il faut utiliser un outil d'écartement muni d'un dispositif de réglage de l'électrode de masse (voir photo) ou une pince à becs fins.

La mayoría de las bujías Double Platinum de Champion están equipadas con tecnología de filamentos. Los electrodos de filamentos ayudan a concentrar el campo eléctrico entre los dos electrodos permitiendo que la bujía logre el máximo rendimiento.

Aunque se determina en fábrica la separación entre puntas de todas las bujías Champion, tal vez sea necesario ajustar la separación ligeramente para su motor. La separación entre puntas de bujías de filamentos debe realizarse siempre ajustando el electrodo de tierra sin hacer contacto con el electrodo central.

Al doblar o apalancar el electrodo de tierra mientras esté en contacto con el metal precioso se puede dañar la bujía poniendo en peligro el rendimiento y la duración de la misma.

Al ajustar el electrodo de tierra, use una herramienta de separación con un electrodo de tierra con una herramienta de ajuste del electrodo de tierra (indicado) o un par de alicates de punta de aguja.

Note: Use a circular tape gap gauge only to measure, not pry.
Note : Une jauge d'épaisseur conique sert uniquement à mesurer — ne pas s'en servir comme levier.
Nota: Use un calibre circular de separaciones entre electrodos solamente para medir, no apalancar.

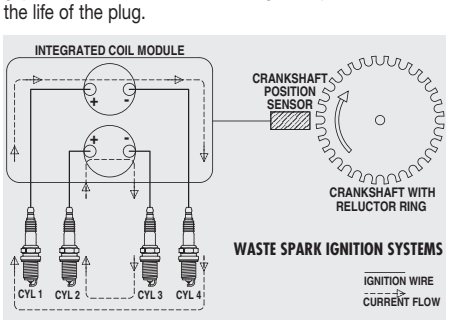

D.I.S. IGNITION AND DOUBLE PLATINUM PLUGS
BOUGIES D'ALLUMAGE ÉLECTRONIQUE SANS DISTRIBUTEUR ET DOUBLE PLATINUM
BUJÍAS DE ENCENDIDO D.I.S. Y DOBLE PLATINUM

Beginning in the mid-1980's a new style of Distributorless Ignition (D.I.S.) started to appear in Domestic and Import Cars. One type of D.I.S. uses a Waste Spark arrangement, where a single coil fires the spark plugs on the 'waste' (exhaust) stroke as well as the 'power' (combustion) stroke.

This system helps to accomplish two things; firstly, it is electronically controlled using a crank sensor (some also have cam and knock sensors) and ignition module. This removes the dependency on a distributor and reduces the number of moving parts. Secondly, firing the plug as the exhaust gases leave the cylinder helps reduce exhaust emissions. Any unburned fuel (hydrocarbons) can be burned prior to reaching the catalytic converter.

Due to the design of the system, Waste Spark Ignition systems place an unusual demand on the spark plug. Because the plug fires in both directions (positive and negative polarity-see diagram) this increases the wear rate of the spark plug because plug erosion is occurring at the center electrode and the ground electrode (as opposed to traditional ignitionsystems that mostly wear the center electrode).

Vehicles equipped with Waste Spark ignition are usually equipped with Double Platinum plugs and should always be replaced with a Double Platinum equivalent. Many vehicles built from 1985 to 1994 were equipped with non-precious metal plugs and experience very short plug life. To help prevent this Champion recommends using Double Platinum Spark Plugs whenever an engine is equipped with Waste Spark Ignition. Double Platinum will decrease gap erosion and allow consistent ignition performance for the life of the plug.

Vers le milieu des années 80, un nouveau genre d'allumage sans distributeur a commencé à faire son apparition sur les voitures nord-américaines et importées. Un autre type de système d'allumage sans distributeur appelé " Waste Spark " enflamme les bougies au moyen d'une bobine unique lors des deux dernières opérations du cycle moteur, soit la combustion et l'échappement.

Ce système contribue à deux principaux facteurs. D'abord, il est commandé de manière électronique au moyen du capteur de position du vilebrequin (certains sont munis de capteurs d'angle d'arbre à cames et de détonation) et du module d'allumage. Un distributeur d'allumage n'est donc pas requis, ce qui réduit d'autant le nombre de pièces mobiles. Ensuite, l'inflammation de la bougie au moment où les gaz d'échappement sont évacués du cylindre contribue à réduire les émissions d'échappement. Tout carburant imbrûlé (hydrocarbures) peut être brûlé avant d'atteindre le catalyseur.

En raison de leur concept, les systèmes d'allumage " Waste Spark " sont très exigeants pour les bougies. Comme la bougie s'enflamme dans les deux sens (polarité positive et négative - voir le schéma), sa vitesse d'usure augmente, car l'érosion se produit au niveau des électrodes centrale et de masse (contrairement aux systèmes d'allumage traditionnels où l'usure se produit surtout au niveau de l'électrode centrale).

Les véhicules équipés de l'allumage Waste Spark sont généralement dotés de bougies Double Platinum. Celles-ci doivent toujours être remplacées par des bougies double platine équivalentes. Bon nombre de véhicules construits de 1985 à 1994 étaient équipés de bougies sans métal précieux dont la durée de vie était très courte. Afin de prévenir ce problème, Champion recommande l'utilisation de bougies Double Platinum sur tout moteur équipé de l'allumage Waste Spark. Le platine réduit l'érosion de l'écartement et favorise une performance constante de l'allumage, ce qui contribue à préserver la durée de vie de la bougie.

A mediados de los años 80, empezó a aparecer un nuevo estilo de encendido sin distribuidor (D.I.S.) en automóviles nortemaericanos e importados. Un tipo de D.I.S. utiliza una configuración en que una sola bobina enciende las bujías en el tiempo de 'escape' así como en el tiempo de 'potencia' (combustión).

Este sistema ayuda a conseguir dos cosas; en primer lugar, está controlado electrónicamente usando un sensor de arranque (algunos también tienen sensores de levas y detonación) y un módulo de encendido. Esto elimina la dependencia de un distribuidor y reduce el número de piezas móviles. En segundo lugar, al encender la bujía a medida que salen los gases de escape del cilindro permite reducir las emisiones de escape. Cualquier combustible sin quemar (hidrocarburos) puede consumirse antes de llegar al catalizador.

Debido al diseño del sistema, los sistemas de encendido de escape exigen una demanda indebida de la bujía. Debido a que la bujía se enciende en ambos sentidos (polaridad positiva y negativa-vea el diagrama) esto aumenta la velocidad de desgaste de la bujía porque la erosión de la bujía se produce en el electrodo central y en el electrodo de tierra (en vez de en el caso de los sistemas de encendido tradicionales donde se desgasta sobre todo el electrodo central).

Los vehículos equipados con un encendido de escape están equipados normalmente con bujías Double Platinum y deben reemplazarse siempre por un equivalente de Double Platinum. Muchos vehículos fabricados de 1985 a 1994 estaban equipados con bujías de metales que no son preciosos y tienen una duración muy corta. Para prevenir esto, Champion recomienda usar bujías Double Platinum siempre que el motor esté equipado con un encendido de escape. Las bujías Double Platinum disminuirán la erosión de la separación entre puntas y permitirán un rendimiento de encendido uniforme durante la vida útil de la bujía.

FORD THREAD DESIGN

There are certain Ford engines where the original equipment spark plugs have what is known as a half-thread shell design. The purpose of this design is to allow for automated plug installation at the engine assembly factory. Both Ford and Champion spark plugs have identical heat ranges, reach, hex size and insulator nose designs. Champion offers a full-thread design, where Ford uses the half-thread.

If you compare dimensions (see illustrations below), you can see that both plugs protrude the same distance into the combustion chamber. In the interest of the best possible application coverage with the fewest number of SKUs, Champion offers full-thread designs which will replace the Ford half-thread design.

CONCEPT SEMI-FILETÉ DE FORD

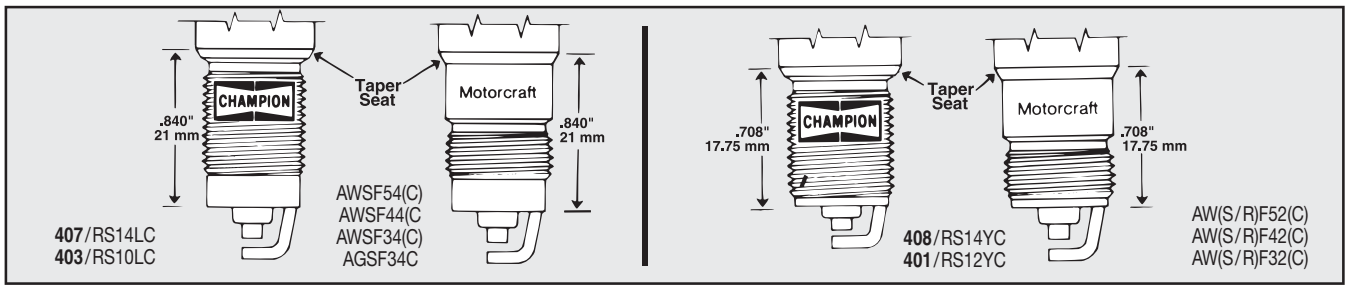

Certains moteurs Ford sont dotés de bougies d'équipement d'origine dont le culot est de type semi-filetée. Le but de ce genre de conception est de permettre l'installation automatisée des bougies sur la chaîne de montage du moteur. Les bougies Ford et Champion ont toutes deux les mêmes degrés de chaleur, les mêmes dimensions hexagonales et le même concept de pointe d'isolant. La bougie Champion comporte un culot à filetage complet, tandis que la bougie Ford est dotée d'un culot semi-fileté.

Si l'on compare les dimensions (voir illustration ci-dessous), on constate que les deux bougies font saillie exactement à la même distance à l'intérieur de la chambre de combustion. Afin de fournir la meilleure couverture d'applications qui soit avec le moins d'unités d'inventaire possibles, Champion offre le modèle à culot entièrement fileté pour remplacer le modèle Ford à culot semi-fileté.

DISEÑO DE ROSCAS FORD

Hay ciertos motores Ford cuyas bujías originales tienen un diseño de cubierta llamado de media rosca. La finalidad de este diseño es permitir la instalación automatizada de bujías en la cadena de montaje de motores de la fábrica. Tanto las bujías Ford como Champion tienen gamas de temperaturas, distancias, tamaños hexagonales y puntas aisladoras idénticas. Champion ofrece un diseño de rosca completo, mientras que Ford usa una media rosca.

Si se comparan las dimensiones (vea las ilustraciones de abajo), se puede ver que ambas bujías sobresalen la misma distancia dentro de la cámara de combustión. En el interés de la mejor cobertura posible de las aplicaciones con el mínimo número de SKU, Champion ofrece diseños de rosca completa que reemplazarán el diseño de media rosca de Ford.

LPG, CNG, LNG FUEL INFORMATION

Dual fuel poses a unique problem for ignition. A gaseous fuel gap at .020″ is inadequate for gasoline during low speed and light load, especially where .045″ and higher gaps are recommended in order to meet emission standards. At the same time, the voltage required with gaseous fuel and a .045″ gap can cause an older ignition system to misfire in just a few thousand kilometers. So what do we do? Compromise.

The following table is a "ballpark" guide to use in setting gap spaces. We recommend that you follow manufacturers' guidelines. Each assumes the total ignition system is in excellent condition.

If the spark plug heat range was correct for gasoline, and no increase in compression is made for the gaseous fuel conversion, the same plug can be used.

Where the compression ratio is increased by more than one number, however, a plug one or two steps colder will probably be required.

Many conversion manufacturers and suppliers may have established their own recommendations from engineering evaluations; it is suggested their guidelines be followed. (For additional heat range information, see Spark Plug Heat Range Chart.)

RENSEIGNEMENTS SUR LES GPL, GNC ET GNL

Le carburant combiné pose un problème particulier pour l'allumage. Un écartement d'électrode réglé à 0,020 po pour un carburant gazeux ne convient pas à l'essence lors de conduite à basse vitesse avec une charge légère, spécialement lorsqu'un écartement de 0,045 ou plus est recommandé pour répondre aux normes sur les émissions. Par ailleurs, dans le cas d'un système d'allumage de type plus ancien, la tension requise pour le carburant gazeux, combinée à un écartement de 0,045 po, peut produire des ratés d'allumage après quelques milliers de kilomètres seulement. Que faire pour régler ce probème? Opter pour un compromis.

Le tableau suivant constitue un guide "approximatif" que l'on peut utiliser pour régler les écartements. Nous recommandons de suivre attentivement les directives du fabricant. Chacune d'elles suppose toutefois que tout le système d'allumage est en parfaite condition.

Dans le cas où la gamme de chaleur d'une bougie convient pour l'essence et qu'aucune augmentation de compression n'est effectuée pour la conversion au carburant gazeux, le même type de bougie peut être utilisé.

Toutefois lorsque le taux de compression est augmenté de plus d'un chiffre, une bougie plus froide de un ou deux degrés sera probablement requise.

Il est possible que plusieurs fabricants et fournisseurs de systèmes de conversion aient établi leurs propres recommandations à partir d'études d'ingénierie. On suggère alors de suivre leurs directives (pour tous renseignements supplémentaires sur les gammes de chaleur, voir le tableau des gammes de chaleur pour bougies).

INFORMACIÓN SOBRE COMBUSTIBLES LPG, CNG, LNG

El combustible doble plantea un problema único para el encendido. Una separación entre puntas de 0,020″ para combustible gaseoso es inadecuada para gasolina en aplicaciones de baja velocidad y carga ligera, especialmente en casos en que se recomienden separaciones de 0,045″ y mayores para cumplir con las normas de las emisiones. Al mismo tiempo, el voltaje necesario con el combustible gaseoso y una separación de 0,045″ puede hacer que se produzcan fallas de encendido en un sistema de encendido más antiguo simplemente poco después de recorrer unos pocos miles de kilómetros. ¿Qué se puede hacer en ese caso? Buscar un término medio.

La tabla siguiente es una guía "aproximada" para usar en el ajuste de separaciones entre puntas. Recomendamos que siga las guías del fabricante. Se supone que todo el sistema de encendido está en condiciones excelentes.

Si la gama de temperaturas de la bujía era correcta para la gasolina, y no aumenta la compresión para la conversión de combustible gaseoso, se puede usar la misma bujía.

No obstante, cuando se aumenta la razón de compresión en más de un número, probablemente se necesitará una bujía uno o dos pasos más fría.

Muchos fabricantes y proveedores de conversión podrían haber establecido sus propias recomendaciones a partir de evaluaciones de ingeniería; se sugiere que se sigan sus normas. (Para obtener información adicional sobre la gama de temperaturas, vea la tabla de temperaturas de las bujías).

	GASEOUS FUEL ONLY* CARBURANTS GAZEUX SEULEMENT* SÓLO COMBUSTIBLE GASEOSO *	COMBINATION GASEOUS FUEL/GASOLINE CARBURANTS GAZEUX COMBINÉS/ESSENCE COMBINACIÓN DE COMBUSTIBLE GASEOSO/GASOLINA
Standard Ignition (Mechanical) Allumage standard (Mécanique) Encendido normal (mecánico)	.018 - .023 (0,45 -0,055mm) (0,45 -0,055mm)	.024 - .029 (0,65 - 0,75mm) (0,65 - 0,75mm)
Electronic Ignition (Transistor) Allumage électronique (Transistor) Encendido electrónico (transistor)	.020 - .030 (0,5 - 0,75mm) (0,5 - 0,75mm)	.028 - .040 (0,7 - 1,0mm) (0,7 - 1,0mm)

* Lower limit may be more desirable at elevation above 1300m (4,000 ft.) to prevent flashover or tracking.
* Une limite plus basse peut être souhaitable à plus de 1300 m (4 000 pi) d'altitude dans le but de prévenir les crachements d'étincelles et le décalage.
* El límite inferior puede ser más adecuado a elevaciones superiores a los 1300 m (4000 pies) para impedir descargas disruptivas o trayectorias de carbón.

RFI (RADIO FREQUENCY INTERFERENCE)

Radio Frequency Interference is created by the ignition systems of internal combustion engines. During the microseconds of time that the spark is occurring at the spark plug gap, high frequency bursts of energy are created. These bursts of energy cause static and interference in radios, televisions, telephones and other sensitive electronic devices.

In 1961, the Society of Automotive Engineers (SAE) created a standard for acceptable levels of RFI. The most common method of suppressing RFI is to install a resistor in series with the spark plug's center electrode.

Today's automobiles are loaded with sensitive electronic hardware and high quality audio components. In addition, RFI created by ignition systems may cause interference with a wide range of communication devices, including aircraft navigational equipment. For these reasons, resistor plugs are specified for most automotive and small engines.

IFR (INTERFÉRENCE DE FRÉQUENCES RADIOS)

L'interférence de fréquence radio est créée par les systèmes d'allumage des moteurs à combustion interne. Durant la microseconde où l'étincelle se produit dans l'écartement de la bougie, des pointes d'énergie à très haute fréquence sont créées. Ces pointes d'énergie produisent de la statique et de l'interférence dans les radios, les téléviseurs, les téléphones et autres dispositifs électroniques sensibles.

En 1961, la Société des ingénieurs de l'automobile (SAE) a établi une norme relativement aux niveaux acceptables de IFR. La méthode la plus courante de suppression des IFR consiste à installer une résistance antiparasite en série avec l'électrode centrale de la bougie.

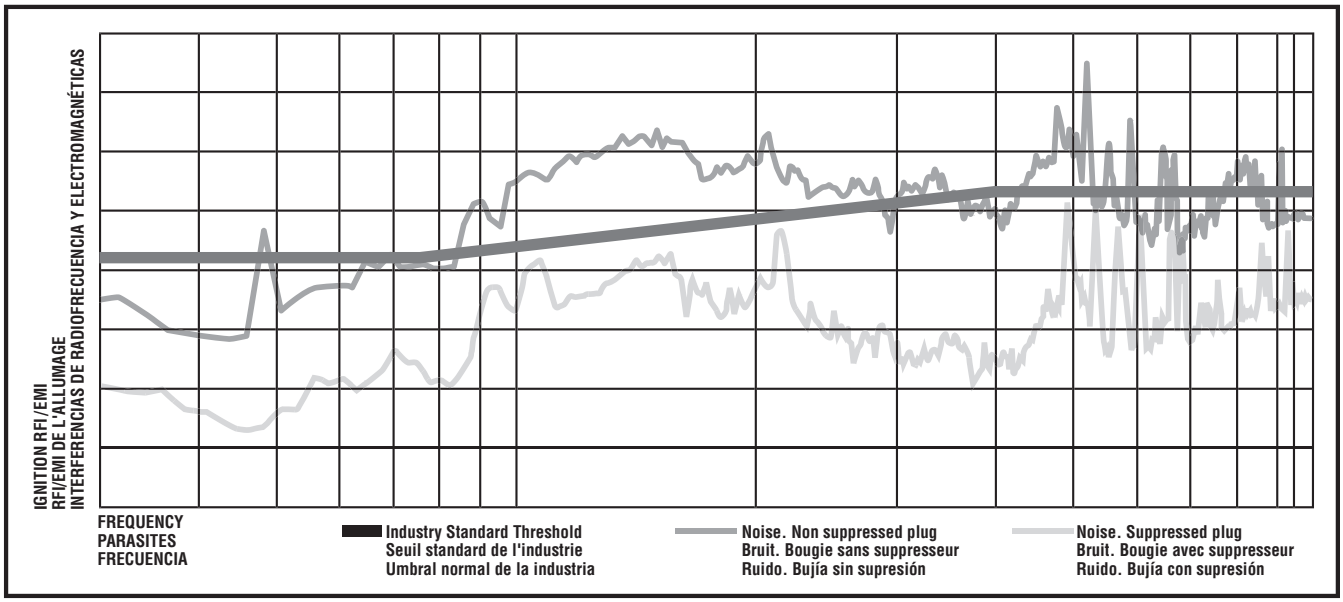

Les automobiles d'aujourd'hui contiennent un grand nombre d'appareils électroniques sensibles et de composantes audio de haute qualité. Les IFR sont créées par lessystèmes d'allumage peuvent causer de l'interférence avecune grande variété de dispositifs de communication, y compris avec les équipements de navigation utilisés dans les avions. C'est pour cette raison que les bougies à résistance antiparasite sont spécifiées pour la plupart des moteur d'automobile et petits moteurs.

INTERFERENCIAS DE RADIOFRECUENCIA

Las interferencias de radiofrecuencia son generadas por los sistemas de encendido de los motores de combustión interna. Durante el intervalo de microsegundos en que se produce la chispa en la bujía, se producen aumentos súbitos de energía de alta frecuencia. Estos aumentos súbitos de energía producen estática e interferencias en radios, televisores, teléfonos y otros dispositivos electrónicos sensibles.

En 1961, la Sociedad de Ingenieros Automotrices (SAE) estableció una norma para niveles aceptables de interferencias de radiofrecuencia. El método más común de suprimir las interferencias de radiofrecuencia consiste en instalar un resistor en serie con el electrodo central de la bujía.

En la actualidad, los automóviles están llenos de equipos electrónicos sensibles y componentes de sonido de alta calidad. Además, las interferencias de radiofrecuencia creadas por los sistemas de encendido pueden causar interferencias con una amplia gama de dispositivos de comunicación, incluidos equipos de navegación aérea. Por estos motivos, se especifican bujías con resistor en la mayoría de los motores automotrices y pequeños.

CHAMPION RESISTORS

SAC-9 SUPPRESSOR

Champion manufactured its first suppressor-type spark plugs in 1931. These plugs featured a carbon-based resistor to suppress the ignition noise. In addition to reducing RFI, resistor plugs often increase electrode life and they do not require higher voltage than plugs of the same general type.

Champion developed the SAC-9 suppressor in the early 1980s. This resistor/suppressor is formed from strontium carbonate, aluminum oxide and copper oxide powders, and is extremely reliable. They are used in Champion standard "R" type resistor plugs.

An important feature of Champion plugs with the SAC-9 suppressor is that the resistance of the plug cannot be accurately measured with typical low voltage ohm meters. However, because of the extremely high dependability of the SAC-9, spark plug resistance should not be of concern in diagnosing ignition system performance problems.

RÉSISTANCES ANTIPARASITES CHAMPION

SUPPRESSEUR MAGNÉTIQUE SAC-9

Champion a fabriqué ses premières bougies à suppression magnétique en 1931. Ces bougies comportaient une résistance à base de carbone pour supprimer l'interférence de l'allumage. En plus de réduire les IFR, les bougies à résistance anatiparasite augmentent souvent la durée de vie de l'électrode et ne requièrent pas une tension plus élevée que d'autres bougies du même type.

Champion a développé le suppresseur magnétique SAC-9 au tout début des années 1980. Ce dispositif résistance/suppresseur se compose de carbonate de strontium, d'oxyde d'aluminium et de poudres d'oxyde de cuivre et est extrêmement fiable. Ces dispositifs sont utilisés dans toutes les bougies à résistance antiparasite standard de type "R" Champion.

L'une des caractéristiques importantes des bougies Champion dotées d'un suppresseur SAC-9 est que la résistance de la bougie ne peut être mesurée de façon précise à l'aide d'un voltmètre-ohmmètre à basse tension ordinaire. Toutefois, étant donné l'extrême fiabilité du SAC-9, la résistance de ces bougies ne devrait faire l'objet d'aucune inquiétude lors du diagnostic des problèmes de performance du système d'allumage.

RESISTORES CHAMPION

SUPRESOR SAC-9

Champion fabricó sus primeras bujías tipo supresor en 1931. Estas bujías disponían de un resistor a base de carbón para suprimir el ruido de encendido. Además de reducir las interferencias de radiofrecuencia, las bujías de resistor prolongan a menudo la duración del electrodo y no requieren un mayor voltaje que las bujías del mismo tipo general.

Champion desarrolló el supresor SAC-9 a principios de los años 80. Este resistor/supresor está formado a partir de polvos de carbonato de estroncio, óxido de aluminio y óxido de cobre, y es extremadamente fiable. Se usan en todas las bujías tipo resistor "R" estándar de Champion.

Una característica importante de las bujías Champion con el supresor SAC-9 es que la resistencia de la bujía no puede medirse precisamente con ohmiómetros de bajo voltaje típicos. Sin embargo, debido a la dependencia extremadamente alta del SAC-9, la resistencia de la bujía no debe representar ninguna dificultad en el diagnóstico de problemas de rendimiento del sistema de encendido.

F.I.S.S. RESISTOR (FIRED IN SUPPRESSOR SEAL)

The F.I.S.S. resistor was added to the Champion spark plug line in the mid-1990's. This unique and highly durable suppressor can be easily identified in all Champion automotive plugs that have a black terminal end.

Champion begins the F.I.S.S. process by filling the insulator with a proprietary glass mixture. This mixture has inherent resistive qualities that will later help suppress RFI in the Ignition system. The glass mixture is melted as the spark plug passes through a heated kiln. When the plug terminal is assembled in the insulator body, the mixture cools and forms a solid glass seal within the insulator. The cooling action produces a perfect hermetic seal for the center electrode as well as a very durable suppressor.

In addition to a durable seal the F.I.S.S. resistor provides technicians the ability to check resistance with a conventional DVOM (Digital Volt Ohmmeter). Champion's F.I.S.S. resistor will produce a terminal resistance in the range of 3,000-10,000 ohms at room temperature.

"Q" TYPE INDUCTIVE SUPPRESSORS

For high performance, capacitive discharge (CD) ignition systems, spark output can be greatly reduced by a spark plug's resistance. In the early 1970s Champion developed new suppressor plugs which use a wire wound inductive coil to reduce RFI without negatively affecting ignition performance. These coils are used in all Champion "Q" type suppressor plugs.

"Q" type suppressor plugs are specified for most Evinrude and Johnson outboard engines with CD ignition. Usage of non-Q types (or standard resistor plugs) can actually cause engine misfire and a loss in performance.

RÉSISTANCE F.I.S.S. (ALLUMAGE DANS LE SUPPRESSEUR)

La résistance F.I.S.S. a été ajoutée à la ligne de bougies Champion au milieu des années 90. Ce suppresseur magnétique unique et très durable est facile à identifier parmi les bougies Champion munies d'une borne noire.

Le procédé F.I.S.S. de Champion commence par le remplissage de l'isolant avec un mélange de verre breveté. Ce mélange possède des qualités de résistance qui contribuent à supprimer les IFR dans le système d'allumage. Le mélange de verre est ensuite fondu lorsque la bougie est passée dans un four chaud. Une fois que la borne de la bougie est assemblée dans le corps de l'isolant, le mélange refroidit et forme un joint de verre solide dans l'isolant. L'action refroidissante produit un scellement parfaitement hermétique pour l'électrode centrale ainsi qu'un suppresseur magnétique très durable.

En plus d'avoir un joint ultra-solide, la résistance F.I.S.S. offre aux techniciens la capacité de vérifier la résistance au moyen d'un voltmètre numérique ordinaire La résistance F.I.S.S. de Champion produit une résistance de "3000 à 10 000 ohms à la borne (à une température ambiante).

SUPPRESSEURS À INDUCTION DE TYPE "Q"

Pour les systèmes haute performance à décharge capacitive (CD), la production d'étincelles peut être largement réduite par une résistance antiparasite de bougie. Au début des années 1970, Champion a créé de nouvelles bougies à suppression magnétique comportant une bobine à induction pour réduire les IFR sans influencer de façon négative la performance de l'allumage. Ces bobines sont utilisées dans toutes les bougies à suppression magnétique Champion de type "Q".

Les bougies à suppression magnétique de type "Q" sont spécifiées pour la plupart des moteurs hors-bord Evinrude et Johnson dotés de système d'allumage à décharge capacitive. L'utilisation de bougies autres que de type "Q" (ou bougie à résistance standard) peut effectivement provoquer des ratés d'allumage et réduire la performance du moteur.

RESISTOR F.I.S.S. (SELLO FUNDIDO EN SUPRESOR)

Se ha añadido el resistor F.I.S.S. a la gama de bujías Champion a mediados de los 90. Este supresor exclusivo y altamente duradero puede identificarse fácilmente en todas las bujías automotrices Champion que tenga un extremo de terminal negro. Champion empieza el proceso F.I.S.S. rellenando el aislante con una mezcla de vidrio propietaria. Esta mezcla tiene propiedades resistivas inherentes que contribuirán más adelante a suprimir las interferencias de radiofrecuencia en el sistema de encendido. La mezcla de vidrio se funde a medida que la bujía atraviesa un horno giratorio calentado. Cuando el terminal de la bujía está montado en el cuerpo del aislante, la mezcla se enfría y forma un sello de vidrio macizo dentro del aislante. La acción de enfriamiento produce un sello hermético perfecto para el electrodo central así como un supresor muy duradero.

Además de un sello duradero, el resistor F.I.S.S. proporciona a los técnicos la capacidad de comprobar la resistencia con un voltiohmiómetro digital convencional.El resistor F.I.S.S. de Champion producirá una resistencia del terminal en el intervalo de 3000-10.000 ohmios a la temperatura ambiente.

SUPRESORES INDUCTORES TIPO "Q"

Para una descarga capacitora (CD) de alto rendimiento, la producción de las chispas pueden reducirse considerablemente por medio de la resistencia de una bujía. A principios de los 70, Champion desarrolló nuevas bujías supresoras que usan una bobina inductora para reducir las interferencias de radiofrecuencia sin afectar negativamente el rendimiento del encendido. Estas bobinas se usan en todas las bujías supresoras tipo "Q" de Champion.

Se especifican bujías supresoras tipo "Q" en la mayoría de los motores fuera borda de Evinrude y Johnson con encendido CD. El empleo de bujías que no sean del tipo "Q" (o bujías de resistor normal) puede realmente causar fallas de encendido en el motor y una pérdida de rendimiento.

FUEL INJECTOR SERVICE AND SPARK PLUG PERFORMANCE

Due to the nature of modern fuel systems, high pressures are required to obtain satisfactory results from any fuel injector cleaning. This usually means using a closed-loop fuel injector machine that adapts to the engine's existing fuel system. The service is performed by running solutions and cleaners through the engine at operating temperatures anywhere from 5 to 20 minutes (determined by vehicle needs). The vehicle's fuel system is reattached to complete the service.

Besides regular fuel safety precautions (see appropriate vehicle service manual or equipment manufacturer), consideration should be given to the spark plugs when cleaning fuel injectors. Fuel injector cleaners tend to run hotter and leaner than ordinary gasoline. In addition most engines operate at a raised idle during fuel service (most cleaners work better at 1500-2000 rpm). This can cause spark plug tips to become contaminated and coated with residual deposits. Although the fuel injector cleaner itself may be non-conductive the glazing on the plugs causes fuel and carbon particles to become embedded in the spark plug insulator. This makes the plug susceptible to carbon tracking or fouling. Although the vehicle may run good in the shop, the customer may begin to feel driveability symptoms as more fuel collects on the insulators. Plugs that have encountered this will have reddish-brown or even purple deposits on the insulators and the electrodes will appear shiny (almost wet).

Champion recommends performing ALL fuel injection service BEFORE replacing the spark plugs. Of course, this presents a problem because the engine is far too hot to remove the plugs immediately after a fuel injection service. To prevent this try to schedule fuel injection service with enough time to allow for vehicle cool down. You'll have both happier customers and spark plugs!

ENTRETIEN DES INJECTEURS ET PERFORMANCE DES BOUGIES

Étant donné la nature des systèmes de carburant modernes, des pressions élevées sont requises pour que le nettoyage des injecteurs donne de bons résultats. Il faut donc généralement utiliser une machine fonctionnant en boucle fermée qui s'adapte au système de carburant du moteur. Le nettoyage consiste à faire circuler des solutions nettoyantes dans tout le moteur, à sa température de fonctionnement, pendant 5 à 20 minutes (selon les besoins du véhicule). Le système de carburant du véhicule est ensuite rebranché pour terminer le nettoyage.

En plus des précautions de sécurité régulières (consulter le manuel d'entretien du véhicule en question ou celui du fabricant de l'équipement), on doit aussi penser aux bougies d'allumage lors du nettoyage des injecteurs. Les nettoyants pour injecteurs ont tendance à devenir plus chaud et à être plus pauvres que l'essence ordinaire. De plus, la plupart des moteurs tournent à régime plus élevé pendant le nettoyage (la plupart des nettoyants sont plus efficaces à un régime de 1 500 à 2 000 tours/min). Ainsi, la pointe de la bougie peut devenir contaminée et être recouverte de dépôts résiduels. Bien que le nettoyant pour injecteur ne soit pas conducteur, le " glaçage " des bougies favorise l'incrustation du carburant et des particules de carbone dans l'isolant de la bougie. La bougie est alors plus susceptible de présenter des fissures carbonisées et de l'encrassement. Même si le véhicule semble fonctionner correctement à l'atelier, il est possible que le client commence à noter des problèmes de fonctionnement à mesure que le carburant s'accumule sur les isolants. L'isolant des bougies présentant ce problème présente habituellement des dépôts brun-rouge ou pourpres et les électrodes semblent lustrées (presque mouillées).

Champion recommande de faire TOUT l'entretien du système d'injection AVANT de remplacer les bougies. Évidemment, cette séquence est plus difficile à réaliser, car après un nettoyage des injecteurs, le moteur est alors beaucoup trop chaud pour enlever les bougies. Il faut donc prévoir assez de temps pour laisser le véhicule refroidir avant de procéder au remplacement des bougies. Ainsi vos clients seront plus heureux et les bougies se porteront mieux!

SERVICIO DE INYECTORES DE COMBUSTIBLE Y BUJÍAS

Debido a la naturaleza de los sistemas de combustible modernos, se necesitan altas presiones para obtener resultados satisfactorios de cualquier limpieza de los inyectores de combustible. Esto normalmente significa usar una máquina de inyección de combustible de circuito cerrado que se adapta al sistema de combustible existente del motor. El servicio se realiza haciendo circular soluciones y limpiadores por el motor a temperaturas de operación entre 5 y 20 minutos (determinadas por las necesidades del vehículo). El sistema de combustible del vehículo se vuelve a conectar para completar el servicio.

Además de las precauciones de seguridad de combustible normales (vea el manual del servicio del vehículo apropiado o fabricante del equipo), se deben tener en cuenta las bujías al limpiar los inyectores de combustible. Los limpiadores de inyectores de combustible tienden a funcionar a mayores temperaturas y con mezclas más pobres que la gasolina normal. Además, la mayor parte de los motores funcionan a un ralentí aumentado durante el servicio del combustible (la mayoría de los limpiadores funcionan mejor a 1500-2000 rpm). Esto puede hacer que las puntas de las bujías se contaminen y se revistan de depósitos residuales. Aunque el limpiador de inyectores de combustible mismo puede ser no conductor, la vitrificación de las bujías hace que el combustible y las partículas de carbón se incrusten en el aislante de la bujía. Esto hace que la bujía sea susceptible a la formación de trayectorias carbonosas o empastamiento. Aunque el vehículo puede funcionar bien en el taller, el cliente puede empezar a sentir los síntomas de manejabilidad a medida que se acumula más combustible en los aislantes. En estos casos, las bujías tendrán depósitos de color marrón rojizo o incluso violeta en los aislantes y los electrodos tendrán un aspecto brillante (casi mojado).

Champion recomienda realizar TODO el servicio de inyección ANTES de reemplazar las bujías. Por supuesto, esto presenta un problema porque el motor está demasiado caliente como para quitar las bujías después de servicio de inyección de combustible. Para impedir esto, trate de programar el servicio de inyección de combustible con tiempo suficiente para dejar que se enfríe el vehículo. ¡De esta forma sus clientes y las bujías estarán más felices!

GAMME THERMIQUE / APPLICATION

Ref. #	Description
1-25	Automobiles, petits moteur, matérial militaire
75-99	Applications industrielles et spéciales

ALLUMAGE ET CONCEPT

Lettre	Description
B	Deux électrodes de masse
C	Concept Copper Plus
D	Pointe saillante, électrode de masse ronde
F	Trois électrodes de masse
G	Fil fin -- electrode en pierre semi-precíeuse
J	Électrode de masse racourcie avec écartement modifié
N	Quatre électrodes de masse
P	Électrode en platine
R	Fil de poussé
Y	Pointe en saillie ordinaire
*PP	Double platine
*PYP	Pointe en saillie double platine
*WP	Iridium/ platine
WPC	Iridium/ platine/ cuivre
WPCC	Iridium/ platine/ double cuivre

* Avec concept Copper Plus

DÉSIGNATION D'ÉCARTEMENT SPÉCIAL

N°	Description
15	Écartement de 0,015 po
17	Écartement de 0,017 po
21	Écartement de 0,021 po
25	Écartement de 0,025 po

Le symbole de vente figurant sur une bougie se sompose d' un numero de "gamme thermique" de base ainsi que de lettres et de chiffres indiquant les caractéristiques principales du modèle de bougie. Les tableaux ci-dessus donnent un exemple détaillé d' un symbole de vente Champion.

SUPRESOR / PROTECCIÓN

Letra	Descripción
E	Blindado 5/8" – 24
F	Resistor Industrial
H	Blindado 3/4" – 20
K	Resistor (aplicación especial)
M	Blindado 5/8" – 24 armamento
R	Resistor
T	Rosca por encima del hexágono 13/16" – 20
U	Separación entre puntas auxiliar
X	Resistor (aplicación especial)

DISEÑO DEL RECUBRIMIENTO

Letra	Tamaño de rosca	Distancia	Hex.
B	18mm	13/16"	7/8"
C	14mm	3/4"	5/8"
D	18mm	1/2"	7/8"
GC*	7/8" – 18	Todas	7/8"
GM*	18mm	Todas	7/8"
H	14mm	7/16"	13/16"
J	14mm	3/8"	13/16"
L	14mm	1/2 " ó 0,472 "	13/16"
M	18mm	1/2"	7/8"
N	14mm	3/4"	13/16"
S	1-1/8"	5/8"	1"
W	7/8" – 18"	Todas	15/16" ó 1"
X	14mm	1/2 " ó 0,500 "	5/8"

* Conector hembra 1" - 20

GAMA TÉRMICA / APLICACIONES

No. ref.	Descripción
1-25	Automotriz, motores pequeños, armamento
75-99	Aplicaciones industriales y especiales

DISENO DE EXTREMO DE ENCENDIDO

Letra	Descripción
B	Electrodo de does tierros
C	Diseño Copper Plus
D	Electrodo redondo a tierra de punta saliente
F	Electrodo de tres tierras
G	Electrodo de alambre fino semiprecioso
J	Electrodo de tierra recortado, incluye separación modificada
N	Electrodo de cuatro tierros
P	Electrodo de platino
R	Alambre de empuje
Y	Punta de núcleo saliente normal
*PP	Platino doble
*PYP	Platino doble saliente
*WP	Iridio/ Platino
WPC	Iridio/ Platino/ Cobre
WPCC	Iridio/ Platino/ Cobre doble

* Incluye diseño Copper Plus

DISEÑO ESPECIAL DE SEPARACIÓN ENTRE PUNTAS

No.	Descripción
15	Separados 0,015"
17	Separados 0,017"
21	Separados 0,021"
25	Separados 0,025"

El símbolo de ventas de una bujía está compuesto por un número básico de "gama térmica" con letras y números para indicar las propiendades importantes del diseño de lay bujía. Estas tablas contienen un ejemplo detallado del símbalo de ventas de Champion.

Spark Plug Installation

The recommended procedure is to remove the old spark plug and install the new spark plug by hand until it contacts the gasket seat. A new gasket should always be used. By removing and installing the spark plug by hand, it will be easier to detect any problems in the thread area such as binding or looseness. Should problems be detected, refer to the NOTE section for recommended course of action. Once all spark plugs have been installed by hand, return to the first spark plug installed and tighten to correct torque. This will allow the spark plug temperature to stabilize with the cylinder head temperatures. (Figure 1)

Torque Recommendations

SERVICE GASKET	SPARK PLUG THREAD SIZE	TORQUE WRENCH	
		CAST IRON HEADS	ALUMINUM HEADS
	Gasket Type		
N678	14mm	26-30 lb-ft	18-22 lb-ft
A678	18mm	32-38 lb-ft	28-34 lb-ft
A478	7/8"	50-55 lb-ft	—
—	1-1/8"	140-150 lb-ft	—
	Tapered Seat		
—	14mm	7-15 lb-ft	7-15 lb-ft
—	18mm	15-20 lb-ft	15-20 lb-ft

FIGURE 1

These torque values are for spark plugs installed in clean, dry threads and should be followed unless otherwise specified by the engine manufacturer. Excessive torque (over-torque) can lead to thread body stretch. This may lead to shell seal leakage and poor heat transfer out of the spark plug, causing premature failure. The leakage can also result in ejection of the insulator from the shell. (Figure 2)

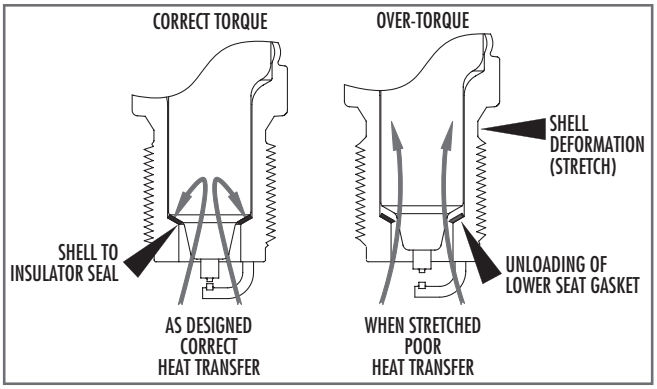

FIGURE 2

If the threads are lubricated, the torque value should be reduced 20%. Apply a very small amount only on the second thread from the firing end of the spark plug. No lubricant must be allowed on the firing end or anywhere on the upper area of the plug.

Spark plug cleanliness is essential for maximum spark plug life. All parts of the ignition system must be kept clean from dirt, oil, grease and paint. Any and all of these contaminants on the inside or outside of leads, boots and connections, or anywhere on the spark plug can cause misfire and/or shortened spark plug life.

NOTE. After the normal service life of a spark plug, one or more of the spark plugs may be a little difficult to remove. Penetrating oil may be used if the spark plug appears to be dangerously tight. Apply steady pressure with a spark plug wrench until the spark plug loosens. Once loosened, if the spark plug is still turning hard, apply more penetrating oil, then tighten and loosen the spark plug repeatedly until the spark plug rotates easily. Before removing the spark plug, blow any dirt from the port area that might be present to prevent it from falling into the combustion chamber.

If the spark plug appeared to be overly tight when removed by hand, it may be due to deposits collecting in the threaded area of the cylinder head. The threads should be cleaned with the proper size and length chaser tool, and the seat wiped clean to assure good seat contact before installing the new spark plug.

Recommended practice would be to clean spark plug port threads and seating area every six months or every spark plug change, whichever is longer.

If chasing the threads does not allow hand installation of the spark plug, further investigation is necessary. At this point it might be necessary to use a tap to verify correct thread size. Before using a tap, it is critical to verify the correct size and pitch. This tap should only be used if the thread chaser does not permit installation of the spark plug by hand. Frequent use can result in unnecessary metal removal, causing the spark plug to be loose in the port. When using the thread chaser tool or tap, a heavy grease should be applied to the flutes to catch debris removed from the thread area.

If looseness is obvious, necessary steps must be taken to avoid serious problems. A loose fitting spark plug could result in torching of the thread area and/or pre-ignition if the heat transfer from the spark plug to the cylinder head is insufficient to cool the spark plug.

Corona vs. Flashover

Under certain atmospheric conditions, a pale bluish glow may be observed around a conductor carrying high voltage. You may have noticed that while driving at night, high-tension cross-country power lines may have an eerie blue glow about them. You may also notice this glow on spark plug insulators if the engine is running in a darkened room. This glow is called corona, and it will not affect ignition output or engine performance. Corona does not indicate a faulty ignition system or spark plug.

Corona

Even if you never see corona it may leave a telltale, non-conductive, yellow or brown stain around the insulator near the top of the shell. This stain should not be interpreted as leakage between the shell and insulator. This stain is caused by the corona discharge attracting airborne dirt to the insulator surface. Corona is not to be confused with flashover, a situation where the voltage actually tracks down the outside of the insulator, resulting in misfire. Corona is harmless and is characterized by a hissing sound, much different than the familiar "snap" caused by flashover.

Corona stain

Flashover occurs because the high tension lead at the spark plug terminal is not adequately sealed and the voltage requirement at the spark plugs firing end is higher than the voltage requirement to arc externally. This external arcing is flashover. Typical causes of flashover are poor or damaged ignition boots, dirty cap ends, high moisture/humidity, damaged spark plug insulators or worn firing end gaps. Flashover is identified on the spark plug ceramic by blackened track marks where the spark has occurred externally and tracked down the surface of the insulator.

Flashover

Cap end flashover track marks

Champion provides cap end shapes to suit the needs of the application. Champion's insulator, combined with good plug boots, will prevent harmful flashover. Corona, however, can occur under any condition where high voltage is present.

Connector Well Flashover / Contamination

Shielded spark plugs have a unique set of challenges. One is contamination in the lead connector well. Contamination in this area of the plug often leads to the creation of a conductive path and eventually misfire due to flashover as seen in the quarter sectioned shielded spark plug photograph below.

Contamination in shielded spark plug well

Connector well contamination may be caused by material falling into the well, faulty or loose connections, moisture or contaminated leads. The lead connection and spark plug well should be carefully inspected for contamination and condition before assembly.

The terminal lead connector (stinger) must be free of contamination internally and externally. The lead connectors are typically ceramic and are designed to last until broken. However, in some cases the inner bore of the stinger can become contaminated. This condition is difficult to detect and can result in a misfire condition. The cause of the contamination may be oil or dirt that becomes lodged between the connector lead and inner bore of the stinger. The result is the formation of a conductive path that causes the spark to arc to ground internal to the stinger with little or no evidence noticeable upon removing the ignition lead from the spark plug well.

This condition is easily detected once the stinger is removed from the ignition lead. Inspection of the lead and bore of the stinger may reveal arc etching of the ceramic and a corresponding mark on the ignition lead. If these marks are found the stinger/lead assembly must be replaced.

Dielectrically failed lead connector/stinger

On the other hand, flashover external to the stinger whether it is from contamination, improper lead attachment or excessive voltages due to a worn out spark plug is often more easily identifiable as can be seen on the stinger in the photograph above. When arcing is found on the outside of the stinger, there is a good chance that the spark plug well also has been etched by the arc. If this is the case, both the stinger and the spark plug need to be replaced.

As greater demands are applied at the spark gap, the required voltage increases. This increased voltage will follow the path of least resistance. Contamination in the spark plug well or stinger assembly will contribute to the creation of alternate paths. Often-times replacement of the spark plug will eliminate the misfire. In the case of a contaminated well it will solve the problem. In the case of a contaminated stinger assembly a new plug with a tight gap and sharp edges will reduce the voltage requirement and provide a temporary solution. If plug life appears to steadily decrease the stinger assembly should be carefully inspected for contamination.

Factors Effecting Voltage Requirements (Vr) Continued

LOW VOLTAGE			HIGH VOLTAGE
LOW	COMPRESSION PRESSURE	HIGH	
ADVANCE AWAY FROM TDC	IGNITION TIMING	RETARD TOWARDS TDC	
LOW	SPEED AND LOAD	HIGH	
HOT	ELECTRODE TEMPERATURE	COLD	
WELL DEFINED	ELECTRODE CONDITION	WORN	
NICKEL	ELECTRODE MATERIAL	PLATINUM	
NARROW	GAP SIZE	WIDE	
NEGATIVE	COIL POLARITY	POSITIVE	
STOICHIOMETRIC	FUEL/AIR RATIO	LEAN	
LOW	TURBOCHARGING	HIGH	

Factors Effecting Spark Plug Tempertures

SPEED AND LOAD
As engine power requirements increase with speed and load, spark plug insulator temperatures increase proportionately. Temperatures at constant speed and load will remain relatively stable.

IGNITION TIMING
Ignition timing has one of the greatest effects on insulator temperature. Advances in timing subjects the insulator, as well as all other parts of the combustion chamber, to longer periods of flame exposure. Recommended spark plug heat ranges, therefore, must consider manufacturer's specified timing and fuel/air ratios. Any advances over specifications will increase insulator temperatures.

CYLINDER HEAD TEMPERATURES
Insulator temperatures will vary almost directly with cylinder head temperatures. A fifty degree increase in coolant temperature will increase the insulator temperature approximately fifty degrees-a negligible amount. In cases of localized cooling system blockages (liquid or air), it is possible to create severe overheating.

Extremes in ambient operating temperatures can be detrimental to cylinder head temperatures by creating a detonation or pre-ignition environment.

DETONATION
Detonation produces severe pressures and temperatures which may affect not only spark plug temperatures but also may impose severe stress on insulators, electrodes, pistons, valves, bearings and other engine components.

PRE-IGNITION
Pre-ignition will generally cause a very rapid and severe temperature rise in the spark plugs and other combustion chamber components.

INSTALLATION TORQUE
Over-torquing or under-torquing upon installation can impair heat transfer out of the spark plug, causing the spark plug to leak and run hotter, decreasing its life.

COLD			HOT
LOW	ENGINE SPEED	HIGH	
LOW	ENGINE LOAD	HIGH	
RETARDED	IGNITION TIMING	ADVANCED	
LOW	CYLINDER HEAD & COOLANT TEMPERATURE	HIGH	
NONE	DETONATION	SEVERE	
NONE	PRE-IGNITION	SEVERE	
CORRECT TORQUE	INSTALLATION TORQUE	OVER/UNDER-TORQUE	

Heat Range Facts

The term “Heat range” refers to a spark plug’s thermal characteristics: more specifically, to its ability to dissipate combustion heat from its firing end to the cylinder head and cooling medium.

A spark plug must maintain an even flow of heat from its firing end to avoid becoming a source of ore-ignition. Yet it also must operate hot enough to burn off conductive deposits that can short-circuit the high voltage and result in misfire.

For any specific application, it is the range of temperatures from low speed and low load to high speed and heavy load that determines the heat range requirement of a spark plug. From a design standpoint, the range of operating temperatures is largely determined by the length of the insulator nose. The longer the insulator nose, the hotter the spark plug. (Figure 3)

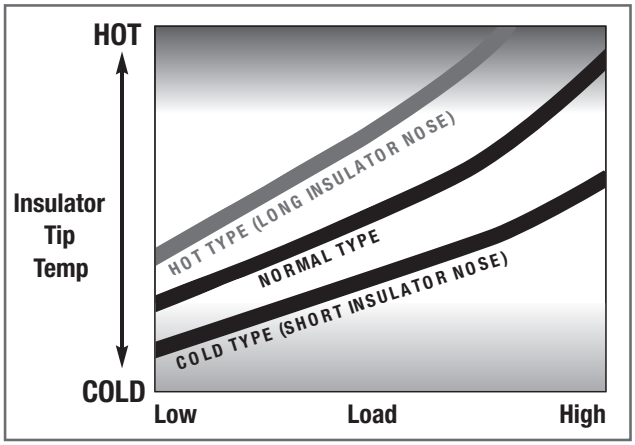

FIGURE 3

Thermocouple plugs designed by Champion are used to monitor firing tip temperatures. For best service at all load conditions, the optimum range of temperatures a plug should operate within is between 700°F and 1200°F (400°C to 650°C). The final selection of a plug for an engine is made on this basis.

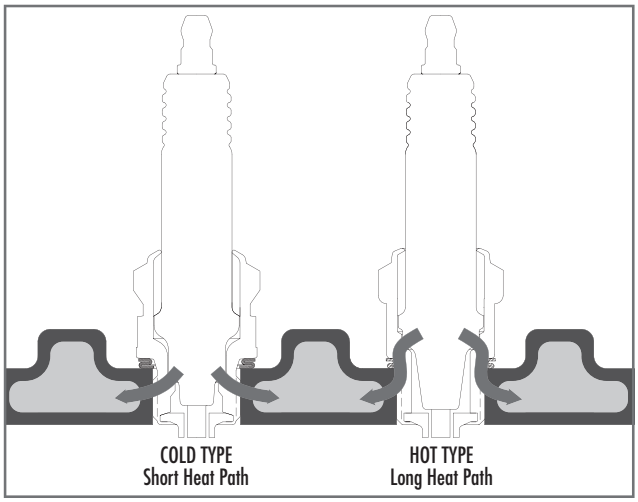

FIGURE 4

Usually each size and design of a spark plug is manufactured in various heat ranges as illustrated. They vary from a “colder” type, which operates on the lower end of the temperature scale, to a “hotter” type, which operates on the higher end of the same scale in the same engine under identical conditions.

Spark plugs with short insulator firing tips are called “cold” designs because they dissipate heat rapidly. They vary from a “colder” type, which operates on the higher end of the temperature scale, to a “hotter” type, which operates on the higher end of the same scale in the same engine under identical conditions. (Figure 4)

It is the temperature at which the plug operates that determines whether it is a hot or cold type, and not necessarily the design.

TYPES OF GROUND ELECTRODE

There are several ground electrode configurations. Those that project furthest from the spark plug into the combustion chamber will have the longest heat transfer path. Four-prong ground electrodes run colder than J-gap ground electrodes due to the shorter heat transfer path. However ground electrode projection may be beneficial for certain applications. (Figure 5)

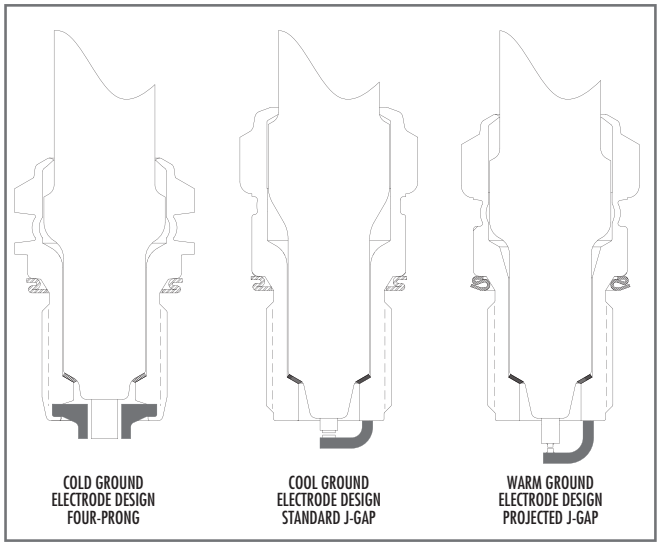

FIGURE 5

COPPER CORED ELECTRODES

The use of copper cored electrodes improves heat transfer, resulting in longer gap life. Copper is used in most center electrodes and in J-gap ground electrodes.

SEAT GASKET TEMPERATURE

Seat gasket thermocouple spark plugs can be used as an indicator of heat transfer out of the spark plug. Spark plug seat gaskets are intended to run no hotter than 400°F. If a seat gasket thermocouple reads above this, spark plugs and engine performance may be adversely affected.

Effect of Fuel on Spark Plug Selection

While most engines are designed for a specific fuel and placed into service with specifications tailored to that fuel, some operators are making conversion to different fuels or multi-fuel operation.

Spark plug selection of heat range and gap spacing should follow manufacturers' guidelines. When converting to alternative fuels see the spark plug selection chart. (Figure 6)

FUEL TYPE	APPROX. OPTIMUM ENGINE COMP. RATIO	AVERAGE OCTANE RES. NO	MANIFOLD HEAT REQUIRED	SPARK PLUG HEAT RANGE	SPARK PLUG GAP SPACING	IGNITION VOLTAGE REQUIRED
Natural Gas (methane)	14:1 (plus)	115-120	DECREASE	COLD	CLOSE	HIGH
LP-Gas	9:1 - 12:1	95-105	↕	↕	↕	↕
Gasoline	8:1 - 11:1	85-100	↕	↕	↕	↕
Kerosene	5:1 - 7:1	35-50	↕	↕	↕	↕
Distillate	4:1	25-30	INCREASE	HOT	OPEN	LOW

FIGURE 6

Low energy fuels often contain contaminants which can decrease spark plug life due to deposit build-up. (Figure 7)

LOW ENERGY	FUEL SOURCE	TYPICAL COMPOSITION
Landfill gas	Natural anaerobic decomposition of organic landfill waste.	55% methane and 45% CO_2 with small amounts of oxygen and nitrogen, and contaminants such as sulfur compounds, halides, acids and solids.
Digester gas	Natural anaerobic decomposition of organic waste from sewage, animal waste or waste from vegetable and alcohol mills.	65% methane and 35% CO_2 with small amounts of oxygen and nitrogen, and contaminants as above.
Blended fuel	Landfill or digester gas enriched with natural gas.	Depends on fuel concentration.

Integral Coil Features

Integral coils must be installed at a maximum of 5 lb-ft after the spark plug has been installed to follow coil manufacturer instructions for tightening. Over-torque can cause damage to coil and/or plug, resulting in possible engine damage. The “T” type and “G” type spark plugs described below are designed to be used in conjunction with ignition systems utilizing an integral (transformer) coil. These plugs along with the use of integral coils have been approved by Canadian Standards Association for Class1, Group D, Division 2 hazardous-location service.

“T” TYPE SPARK PLUGS
A “T” type spark plug is shown in Figure 8. Typical plugs are the RTM82WPCC, RTM77N, RTM78N, RTB78N, RTB80N, RTL85G, RTN79G, TJ83, RTW80N and RTW83F. These coils require that the shell turnover has a 13/16” thread to accommodate the female threaded coil.

FIGURE 8

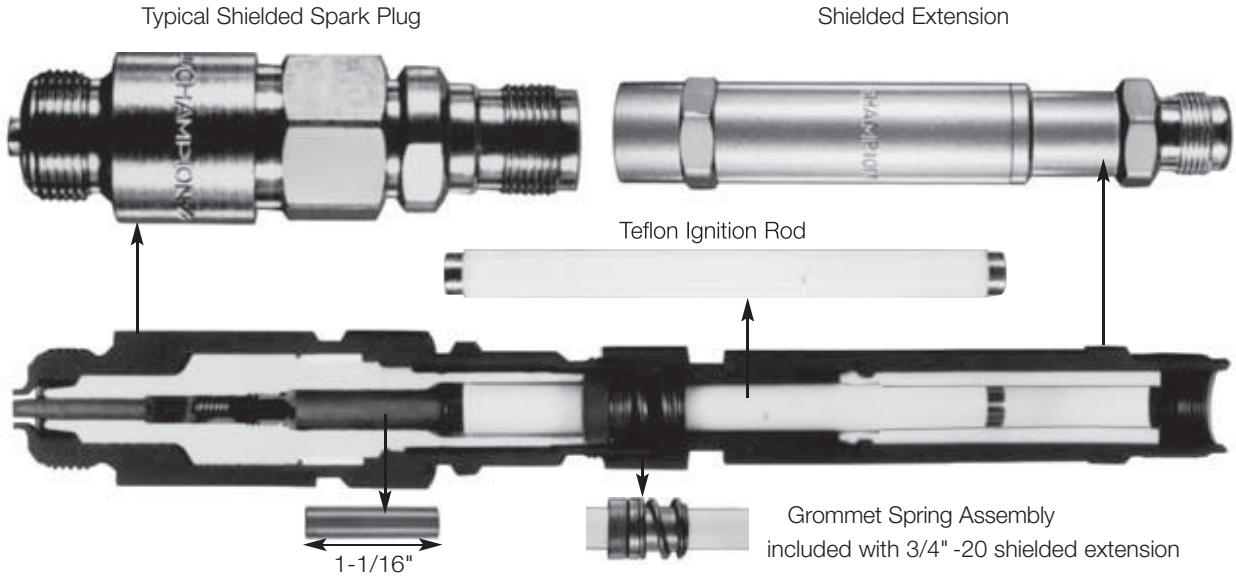

“G” TYPE SPARK PLUG
A “G” type spark plug is shown in Figure 9. Typical plugs are the RGC80N, RGC80F and RGC77N in the 7/8” line and the RGM86N in the 18mm line. These utilize a 1” upper female threaded shell.

FIGURE 9

Shielded Extension Features and Installation

NOTE: This extension assembly can only be used with spark plug with a 1” well depth such as RHL79G, RHL89G, RHN79G, RHM77N, RHM83N, RHM85G, RHW79N, RHB81N. The following have a 2” well and require a brass rod adapter: RHM78PP, RHM78WPCC, RHW77N, RHW78N, RHW80N, HW83F.

- Install spark plug and tighten to recommended torque.
- Take center rod and install spring assembly and rubber grommet with at least 1-1/2" of center rod extending from bottom.
- Insert center rod with spring assembly and grommet into shielded spark plug.
- Install shielded extension over the center rod pushing the grommet and spring assembly down to the shell. This will ensure the center rod is in contact with the terminal of the spark plug.
- Tighten shielded extension to a maximum of 5 lb-ft.

INDUSTRIAL SPARK PLUG ANALYSIS
L'ANALYSE DE LA BOUGIE INDUSTRIELLE
ANÁLISIS DE LA BUJÍA INDUSTRIAL

An effective way to diagnose an engine's operating conditions is to examine the used spark plugs for abnormal conditions. If all systems of a given cylinder are in proper working condition, the recommended spark plug will take on deposit, gap wear and insulator coloring characteristics which must be considered normal. By indexing each plug to its respective cylinder and location during removal, the technician can later scrutinize the plug under magnification to determine the possibility of engine abnormalities.

This procedure can be very useful if conducted as part of regular maintenance inspections. The following series of photographs and explanations may serve as a guide to spark plug and engine analysis; conditions will vary from engine to engine.

NORMAL

Appearance. Slight even wear on electrodes, very light deposits, a coloring of brown or grayish tan. Very clean, deposit-free firing ends are common on LP and natural gas applications.

Indication. Correct spark plug for application; cylinder from which removed is "healthy."

WORN OUT

Appearance. Very pronounced wear on electrodes, widened gap space.

Indication. Worn condition creates high voltage requirement and stresses the ignition system. Replace with equivalent heat range, perform routine ignition maintenance.

BRIDGED GAP

Appearance. A deposit lodged between the electrodes which "short-circuits" the ignition voltage.

Indication. Flaking off of combustion chamber deposits. May happen after long periods of constant speed and load operation followed by cyclic accelerations.

OIL ASH DEPOSITS

Appearance. Light colored (generally grayish) crusty build-up on spark plug firing end. May vary in density from very soft and flaky to extremely hard and rock-like.

Indication. Residual deposits from oil entering the combustion chamber in small amounts and being burned. These deposits, depending on oil additives, may be non-conductive and harmless. However, sufficient quantities of these deposits may build to mask the entire firing end and affect initiation of combustion. Should the deposits be conductive, the potential is great for core nose tracking and misfire.

LANDFILL GAS DEPOSITS

Appearance. Light colored (generally white) crusty build-up on spark plug firing end. May vary in density from very soft and flaky to extremely hard and rock-like.

Indication. Residual deposit from an engine operated on gas from a landfill. This type of fuel is often referred to as "dirty" gas, thus the naturally occurring deposits. These deposits may be non-conductive and harmless, but sufficient quantities may build to mask the entire firing end and interfere with the initiation of combustion. Should the deposits be conductive, the potential is great for core nose tracking and misfire.

DETONATION

Appearance. Electrodes or insulator fractured/physically broken as if by mechanical means.

Indication. Engine operated under abnormal combustion-detonation (uncontrolled burning or exploding of the fuel/air charge). Generally due to excessive temperature from over-heating, improper fuel/air ratios, over-advanced timing, cooling system blockages, insufficient engine tolerances, or improper balance of fuel mixture and timing.

PRE-IGNITION

Appearance. Overheated spark plug with electrodes and/or insulator melted.

Indication. Engine operated under abnormal combustion-pre-ignition (ignition prior to timed spark). Pre-ignition generally results from excessive temperatures created by "hot spots," possibly carbon, sharp valve edge, gasket protruding into the chamber, or improper heat range plug.

CORE NOSE TRACKING

Appearance. Ignition marks etched into the insulator core nose, or its deposits, that travel from the center electrode up the core nose to ground within the shell bore. These marks are often black in color.

Indication. Misfire may occur as the ignition spark has found an alternate path to ground as opposed to the desired path of arcing from center electrode to the ground electrode. Tracking can be caused by any of the following conditions: Conductive deposits on the insulator core nose, too wide a spark gap, too lean a fuel/air ratio, increased cylinder pressures at time of ignition.

CARBON FOULED

Appearance. Soft, black sooty deposits covering firing end.

Indication. Possible problem in the fuel delivery system – overly rich. Weak ignition system, flashover or secondary voltage, leak, or extremely low compression. More common to gasoline fueled auxiliary type engines.

TORCHED SEAT

Appearance. Cutting torch effect in the thread and seat area of the plug shell.

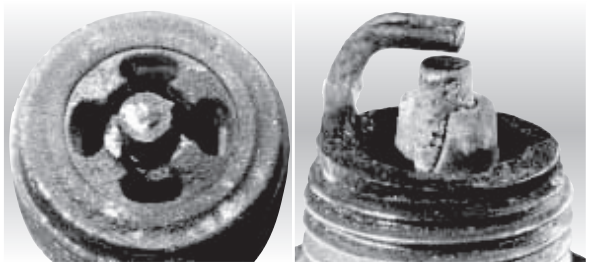

Indication. Plug was not seated properly, could not dissipate heat and allowed gases to blow by the threaded area.

The Spark Plug's Relation to the Ignition System

The ignition system must be capable of supplying the voltage necessary to initiate a spark between the spark plug electrodes. In practice this means there must be considerable "ignition reserve" to compensate for normal wear of the spark plugs and components of the ignition system.

Ignition reserve is the difference between voltage available (Va) from the ignition system, and voltage required (Vr) by the spark plug. If at any time Vr equals Va, misfire will likely occur. (Figure 10)

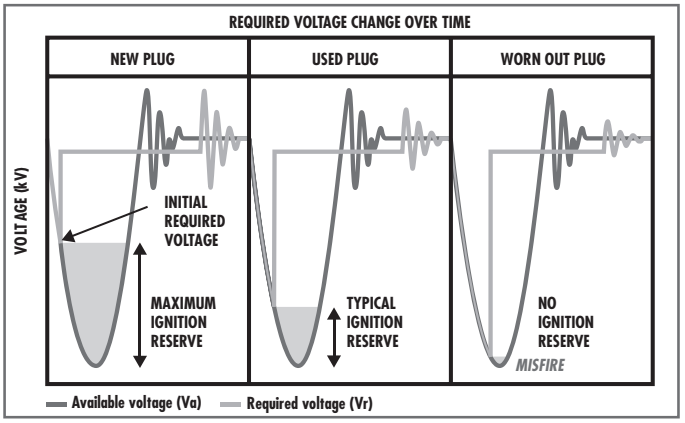

FIGURE 10

Factors Effecting Voltage Requirements (Vr)

COMPRESSION PRESSURE
Depending on the type of fuel, moisture content and voltage source, required voltage increases as pressures increase.

IGNITION TIMING
At TDC (top dead center), voltage requirements will be greatest due to high compression pressures. An advance in timing lowers Vr as pressure decreases. Since the advance creates higher flame temperature, Vr is further reduced by the hotter electrodes. Retarding timing past TDC also decreases Vr as pressures decrease, but appreciable losses of power and temperature result.

SPEED AND LOAD
High speed and load generally produces the highest Vr due to increased cylinder pressures despite the natural increase in electrode temperatures.

ELECTRODE TEMPERATURE
Voltage requirements will decrease as electrode temperatures increase and increase as temperatures decrease.

ELECTRODE CONDITION
Sharp, new electrodes concentrate the spark arcing by offering an easier path for current flow. As new plugs with well-defined electrodes wear, an increase in required voltage results.

ELECTRODE MATERIAL
Commonly used electrode materials are platinum, iridium, gold-palladium and nickel, in descending voltage equipment.

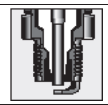

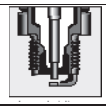

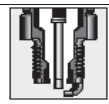

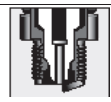

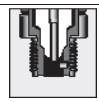

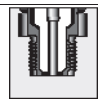

GAP SIZE
With other influencing factors being equal, required voltages will increase as gap size increases.
Multi-strike ignition: While multi-strike ignition can be beneficial for igniting the air-fuel charge, particularly in lean burn applications, it also accelerates gap wear. To minimize wear, use the fewest number of ignition strikes necessary to achieve complete combustion.

COIL POLARITY
Polarity is a design feature of each ignition system. Current flow from center electrode to ground electrode is referred to as "negative polarity." "Positive Polarity" is current flow from the ground electrode to center electrode. Most all manufacturers recommend negative polarity for best spark plug life and performance, since reversed or positive polarity will increase required voltages and substantially reduce ignition system reserve.

FUEL/AIR RATIO
With other factors being equal, voltage requirements will be lowest at the ideal stoichiometric fuel/air ratio. Voltage requirements increase with leaner mixtures because air is a poor conductor.

TURBOCHARGING
Turbocharging increases the voltage requirement because of higher cylinder pressures.

Champion Gaskets and Spark Plug Indexing

Gasket (Part no. and thickness)
10mm solid: Y-674/.045"
10mm thread on: Y-678/.045"
12mm solid: P-674/.057", P-677/.095"
12mm thread on: P-678/.052"
14mm solid: N-673(wide)/.057", N-675/.057", N-677/.135", N-673X1/.080"
14mm thread on: N-678/.052"

Resistor Type
Q = 140 ohm wire wound suppression (inductive)

Indexing Spark Plugs
Race engine designers who desire specific spark plug indexing can refer to the chart below to achieve desired ground electrode position. **DO NOT OVER-TORQUE** or **UNDER-TORQUE** plugs to achieve desired ground position. Serious engine and/or plug damage may occur.

	Spark Plug Rotation and Required Gasket thickness			
Spark Plug Thread and Pitch	1/4 turn	1/2 turn	3/4 turn	Full revolution
10mm x 1.0mm*	.010"	.020"	.030"	.040"
12mm x 1.25mm*	.0125"	.025"	0.0375"	.050"
14mm x 1.25mm*	.0125"	.025"	0.0375"	.050"
18mm x 1.5mm*	.015"	.030"	.045"	.060"
7/8" x 18mm*	.0145"	.029"	.0435"	.058"

*- Indexing table to be used as a GUIDE only, individual engine conditions may effect desired results

Ever since drivers began pursuing the checkered flag, we've been there. Every weekend, in every part of the world, Champion powers more racers to victory than any other spark plug. The simple fact is no spark plug has won more races in any class than Champion.
Champion Powers Them All.

Depuis que les coureurs se disputent le drapeau à damier, nous ont ètè là. Chaque fin de semaine, dans tous les coins du monde, Champion propulse plus de coureurs automobiles vers la victoire que toute autre marque de bougie. En fait, aucune autre bougie n'a remporté plus de victoires que Champion dans toutes les classes de course automobile.
Champion les propulse tous.

Hemos estado presentes desde que los pilotos se lanzaron en busca del banderín de cuadros. Todos los fines de semana, en todas las partes del mundo, Champion es la bujía que da más victorias a los corredores. Es una realidad que ninguna otra bujía ha ganado más carreras que Champion.
Champion los impulsa todo.

CHOOSING RACING SPARK PLUGS

Selecting the proper race plug for your engine can mean the difference between front of the pack and a DNF. When using this guide understand that race plugs are usually of a much colder heat range rating than automotive plugs. Colder plugs must be used in engines with increased cylinder pressures, higher temperatures and greater B.H.P. Other factors such as fuel delivery (turbo, supercharged), fuel types and piston-to-head clearance will also effect proper plug selection.

Step 1
SHELL DESIGN
(Hex/Reach)

The first step in choosing the proper race plug is determining the plug type that your cylinder head/piston will accept. Thread diameter and pitch, thread length, shell seat as well as hex size are all factors that will define what shell type works best for your engine.

Champion provides shells in all types. Consult the race chart on the previous page to choose the best plug for your engine.

Step 2
ELECTRODE DESIGN

The second decision is electrode design and configuration. Fine Wire center or standard electrode? Projected or non-projected? Full coverage 'J-Gap' or perhaps Cut-back or Angled ground wire?

A good rule of thumb is to attain as much projection into the cylinder as possible. But be aware of piston clearance that could prohibit projected designs from being used. Whatever the case, Champion has the plug to get the maximum performance from your race engine.

Step 3
HEAT RANGE

The third factor in choosing a race plug is heat range. Correct heat range is critical in maintaining peak performance throughout the duration of your race or event. Switching to a colder or hotter plug will not increase horsepower, but could affect engine performance. Choosing a plug that is too hot can result in pre-ignition or detonation. A plug that is too cold could cause an engine to stumble, misfire or foul.

The main factors to consider in selecting the proper heat range are:

Type of Race
Specific output
Compression Ratio
Horsepower
Racing Fuel
Methanol
Nitro-Meth
Nitrous Oxide
Super or Turbo Charging

Use this guide to help get you to the winner's circle every time. Still a little confused? Call Champion's race experts at 1-800-325-8886. They will guide you through selecting the right plug for your race event!

CHOISIR DES BOUGIES DE COURSE

Le choix de la bonne bougie de course pour votre moteur peut faire toute la différence entre la victoire et l'abandon. Utilisez ce guide en n'oubliant pas que les bougies de course sont généralement d'une gamme thermique plus basse que les bougies d'automobiles. Des bougies plus froides doivent être utilisées dans les moteurs dont la pression dans les cylindres est plus élevée, qui dégagent plus de chaleur et dont la puissance nominale est plus élevée. D'autres facteurs tels l'alimentation en carburant (turbocompresseur ou suralimentation), les types de carburant et le dégagement entre le piston et la culasse influencent aussi le choix d'une bougie.

Étape 1
CONCEPT DE CULOT
(Hex / portée)

La première étape du choix de la bonne bougie de course est de déterminer le type de bougie qui convient au dégagement entre le piston et la culasse. Le diamètre et le pas du filetage, la longueur des filets, le siège du culot ainsi que la dimension de l'hexagone définissent le type de culot qui convient le mieux à votre moteur.

Champion offre des culots de bougie de tous types. Consulterle tableau de la page précédente pour choisir la bougie qui convient le mieux à votre moteur.

Étape 2
CONCEPT D'ÉLECTRODE

La seconde étape consiste à déterminer le concept et la configuration de l'électrode. Une électrode centrale à fil fin ou standard? Pointe saillante ou non saillante? Écartement en J, électrode raccourcie ou angulaire?

La règle à suivre est d'atteindre autant de projection que possible à l'intérieur du cylindre. Il faut toutefois porter attention au dégagement du piston qui peut empêcher l'utilisation des modèles à pointe saillante. Peu importe le cas, Champion a la bougie qu'il faut à votre moteur decourse pour lui permettre de donner sa pleine performance.

Étape 3
GAMME THERMIQUE

La troisième étape consiste à déterminer la gamme de chaleur. Le choix de la bonne gamme de chaleur est cruciale au maintien d'une performance optimale pendant toute la course. Le choix d'une bougie plus froide ou plus chaude n'augmente en rien la puissance du moteur mais peut en diminuer la performance. Une bougie trop chaude peut favoriser l'auto-allumage ou la détonation, tandis qu'une bougie trop froide peut entraîner des ratés de moteur ou d'allumage ainsi que l'encrassement.

Voici les principaux facteurs à considérer dans le choix de la bonne gamme de chaleur :

Type de course
Tension nominale particulière
Rapport de compression
Puissance du moteur
Carburant de course
Méthanol
Carburant mixte
Oxyde nitreux
Turbocompression ou suralimentation

Utilisez ce guide pour vous propulser dans le cercle des vainqueurs à tout coup. Le choix est-il encore difficile? …Composez le 1 800 325-8886 pour parler à des experts de Champion. Ilssauront vous guider dans le choix de la bonne bougie pourvotre course.

SELECCIÓN DE BUJÍAS PARA CARRERAS

La selección de la bujía apropiada para su motor puede significar la diferencia entre terminar entre los primeros en una carrera o abandonarla. Al usar esta guía, tenga en cuenta que las bujías para carreras suelen tener una gama de temperaturas más fría que las bujías automotrices. Se deben usar bujías más frías en los motores con mayores presiones en los cilindros, mayores temperaturas y mayor potencia al freno. Otros factores tales como el suministro de combustible (turboalimentado, sobrealimentado), tipos de combustible y holgura entre el pistón y la cabeza del cilindro también afectarán la selección apropiada de bujías.

Paso 1
DISEÑO DEL RECUBRIMIENTO
(hexagonal/alcance)

El primer paso para elegir la bujía apropiada consiste en determinar el tipo de bujía que se puede instalar en su cabeza/pistón de cilindro. El diámetro y el paso de rosca, la longitud de la rosca, el asiento del recubrimiento y el tamaño del hexágono son factores que definirán el tipo de recubrimiento que da mejor resultado para su motor.

Champion proporciona cubiertas de todos los tipos. Consulte la tabla de la página anterior para escoger la mejor bujía para su motor.

Paso 2
DISEÑO DE LOS ELECTRODOS

La segunda decisión es el diseño y la configuración de electrodos. ¿Electro central de filamento fino o electrodo normal? ¿Con proyección o sin proyección? ¿Separación entre puntas en forma de "J" de cobertura máxima o quizás cable de masa recortado o en ángulo?

Una buena regla general es alcanzar la máxima proyección en el cilindro que sea posible. Sea consciente de la holgura del pistón que podría prohibir el uso de diseños proyectados. Sea cual sea el caso, Champion tiene la bujía para obtener el rendimiento máximo de su motor de carreras.

Paso 3
GAMA DE TEMPERATURAS

El tercer factor para escoger una bujía de carreras es la gama de temperatures. La gama de temperaturas correcta es crucial para mantener el rendimiento a tope durante la carrera o evento. El cambio a una bujía más fría o más caliente no tendrá un efecto positivo en el rendimiento del motor, pero la selección de una bujía demasiado caliente puede causar un encendido preliminar o detonaciones. Una bujía demasiado fría puede ocasionar fallas de encendido o que se empaste o que el motor tenga problemas de funcionamiento.

Los factores principales que deben tenerse en cuenta en la selección de la gama de temperaturas apropiada son:

Tipo de carrera
Salida específica
Relación de compresión
Potencia
Combustible de carreras
Metanol
Nitro-Metanol
Óxido nitroso
Sobre - o turboalimentado

Use esta guía para llegar al podio todas las veces. Si tiene dudas, llame a los expertos de carreras de Champion al 1-800-325-8886. ¡Le guiarán para seleccionar la bujía correcta para su carrera!

THE MAGNUSON-MOSS WARRANTY IMPROVEMENT ACT STATES...

Changing your vehicle's spark plugs is considered preventive maintenance. The Magnuson-Moss Warranty Improvement Act guarantees you're free to do your own maintenance or to have preventive maintenance performed at the service outlet of your choice–either way you will not void your new car warranty.

When you perform preventive maintenance required under the terms of your vehicle warranty, save your receipts. That way you can prove that you've lived up to your end of the warranty if your vehicle ever requires warranty covered repairs.

Dealers or salesmen cannot legally claim that using Champion spark plugs instead of the original equipment brand voids your vehicle warranty. Tell them that the Magnuson-Moss Warranty Improvement Act makes it against the law for warranties to be conditional on the use of a specific brand of spark plug–unless the brand is provided free.

LA LOI MAGNUSON-MOSS RELATIVE AUX GARANTIES STIPULE...

Le remplacement des bougies d'allumage de votre véhicule est considéré comme faisant partie de l'entretien préventif. La Loi Magnuson-Moss relative aux garanties stipule que vous êtes libre d'effectuer vous-même l'entretien préventif ou de confier cette tâche au centre de service de votre choix. Dans un cas comme dans l'autre, la garantie sur votre voiture neuve ne sera pas annulée.

Lorsque vous faites faire l'entretien préventif requis selon les modalités de votre garantie, conservez vos reçus de caisse qui vous serviront de preuve si jamais votre véhicule devait subir des réparations couvertes par la garantie.

Les détaillants et les vendeurs ne peuvent en toute légalité déclarer que l'utilisation de bougies Champion au lieu de bougies d'équipement d'origine peut invalider la garantie sur votre véhicule. Il faut leur dire que la Loi Magnuson-Moss relative aux garanties rend illégal le fait qu'une garantie soit conditionnelle à l'utilisation d'une marque spécifique de bougies d'allumage, à moins que ces bougies soient fournies gratuitement.

LA LEY DE MEJORA DE GARANTÍAS DE MAGNUSON-MOSS INDICA QUE ...

El cambio de las bujías de un vehículo se considera como mantenimiento preventivo. La ley de mejora de garantías de Magnuson-Moss indica que usted es libre de realizar su propio mantenimiento o hacer que se realice un mantenimiento preventivo en el local de servicio preferido. Al hacer esto no se anulará la garantía del nuevo automóvil.

Cuando realice el mantenimiento preventivo requerido según los términos de la garantía del vehículo, guarde los recibos. De esa forma, podrá probar que ha cumplido con la garantía en lo que se refiere a su parte si su vehículo requiere reparaciones cubiertas por la garantía.

Los distribuidores o vendedores no pueden reclamar legalmente que el uso de las bujías Champion en vez de bujías de la marca original anula la garantía de su vehículo. Dígales que la ley de mejora de garantías de Magnuson-Moss prohibe que las garantías estén supeditadas al uso de una marca específica de bujía, a menos que la marca se suministre de forma gratuita.

IMPORTANT INFORMATION YOU SHOULD KNOW

WHAT WARRANTIES COVER... and what they do not.

According to the Magnuson-Moss Warranty Act, warranties on replacement parts and components (such as spark plugs) used to repair consumer products (such as an automobile) are covered by the act. Warranties on service, however, are not, unless there is a written agreement stating both product and workmanship are covered.

Furthermore, to be a true written warranty, a specific time period must be stated; the Champion guarantee, for example, is good for 2, 3, 5 or 7 years from date of purchase. This also relates to product disclosures; if there is no specific period of time cited on the document it is not considered a "written warranty" according to this act.

The Act also covers only the supplier who has actually made the written warranty. Retailers and resellers may have their own warranty policies, but they are not responsible or liable for the warranty offered by the manufacturer. That is the reason we ask you to contact Champion directly in the event you are dissatisfied with our products; we do not authorize our marketers or retailers to supply replacements or refunds.

Warranties might be confusing, but they are designed to protect you, the consumer. Champion spark plugs are covered by a written statement that guarantees your satisfaction. Installing Champion spark plugs as part of your regular preventive maintenance program will in no way reduce or negate your warranty.

REMEMBER: It is against the law for warranties to be conditional on the use of a specific brand of spark plug–unless the brand is provided free.

INFORMATION IMPORTANTE

CE QUI EST COUVERT PAR LA GARANTIE... et ce qui ne l'est pas.

Selon la Loi Magnuson-Moss relative aux garanties, les garanties sur les pièces et les composantes de rechange (telles que les bougies d'allumage) utilisées pour réparer les produits des consommateurs (tels qu'une voiture) sont couvertes par cette loi. Les garanties sur le service, par contre, ne le sont pas, à moins d'une entente écrite stipulant que les produits et la main-d'oeuvre sont tous deux couverts.

De plus, pour qu'une garantie écrite soit valide, une période de temps spécifique, ou prescription, doit y être stipulée; La garantie Champion, par exemple, a une durée de 2, 3, 5, ou 7 ans à compter de la date d'achat. Cette condition s'applique également à l'indication des produits; selon cette loi, lorsque aucune période de temps, ou prescription, n'est stipulée sur le document, celui-ci n'est pas considéré comme une « garantie écrite ».

Par ailleurs, cette loi ne couvre que le fournisseur qui émet la garantie écrite. Les détaillants et les revendeurs peuvent avoir leurs propres politiques de garantie, mais ils n'ont aucune responsabilité quant à la garantie offerte par le fabricant. C'est pourquoi nous vous demandons de communiquer directement avec Champion si vous n'êtes pas satisfait de nos produits. Nous n'autorisons pas nos marchands ni nos détaillants à offrir des produits de rechange ou des remboursements. Bien que les garanties peuvent sembler compliquées, elles sont conçues spécialement pour protéger le consommateur. Les bougies d'allumage Champion sont couvertes par un énoncé écrit qui garantit votre satisfaction. Installer des bougies Champion dans le cadre d'un programme régulier d'entretien préventif n'annulera ni n'altérera en aucun cas la validité de votre garantie.

REMARQUE : Il est illégal qu'une garantie soit conditionnelle à l'utilisation d'une marque spécifique de bougies, à moins que ces bougies soient fournies gratuitement.

INFORMACIÓN IMPORTANTE QUE DEBE CONOCER

LO QUE CUBREN LAS GARANTÍAS ... y lo que no cubren.

Según la ley de la mejora de garantías de Magnuson-Moss, las garantías sobre piezas y componentes de repuesto (tales como bujías) usados para reparar productos del consumidor (tales como un automóvil) están cubiertas por la ley. No obstante, las garantías sobre el servicio, no están cubiertas a menos que exista un acuerdo por escrito que indique que estén cubiertos tanto el producto como la mano de obra.

Además, para ser una verdadera garantía escrita, se debe indicar un período específico; La garantía de Champion, por ejemplo, es buena para 2, 3, 5 o 7 años contados a partir de la fecha de compra. Esto se relaciona también con las divulgaciones de productos; si no existe un período específico citado en el documento, no se considera una "garantía escrita" según esta ley.

La ley también cubre solamente el proveedor que haya dado realmente la garantía escrita. Los vendedores detallistas o revendedores pueden disponer de sus propias pólizas de garantías, pero no son responsables de la garantía ofrecida por el fabricante. Ésta es la razón por la que le pedimos que se ponga en contacto directamente con Champion en caso de que no esté satisfecho con nuestros productos; no autorizamos a nuestros distribuidores o vendedores detallistas que suministren repuestos o reembolsos.

Las garantías pueden ser confusas, pero están diseñadas para protegerle a usted, el consumidor. Las bujías Champion están cubiertas por una declaración escrita que garantiza su satisfacción. La instalación de bujías Champion como parte de su mantenimiento preventivo regular no disminuirán o negarán la garantía en medida alguna.

RECUERDE: Es ilegal que las garantías estén condicionadas por el uso de una marca específica de bujía, a menos que la marca se proporcione de forma gratuita.

CHAMPION® IRIDIUM

7 YEAR UNLIMITED MILEAGE GUARANTEE OR THE MANUFACTURER'S RECOMMENDED CHANGE INTERVAL (WHICHEVER COMES LAST)!

Champion Spark Plug, a brand of Federal-Mogul Motorparts , guarantees to consumer purchasers that Champion Iridium spark plugs will meet or exceed performance requirements in a properly tuned vehicle for ***84*** months, regardless of mileage driven, or for the manufacturer's recommended change interval (as indicated in the owner's manual), whichever comes last. If for any reason you don't feel completely satisfied with the performance of Champion Iridium spark plugs during the prescribed guarantee period, return the plug(s) with proof of purchase. Champion will refund the purchase price of the spark plugs.

This guarantee does not include vehicles used for commercial purposes (e.g. fleets) or performance events.

GARANTIE DE 7 ANS AVEC KILOMÉTRAGE ILLIMITÉ, OU SELON LES INTERVALLES DE REMPLACEMENT RECOMMANDÉS PAR LE FABRICANT (SELON LA DERNIÈRE ÉVENTUALITÉ)!

Champion Spark Plug, marque de commerce de Federal-Mogul Motorparts, garantit aux consommateurs que les bougies Champion Iridium respecteront ou surpasseront les exigences de performance, lorsqu'elles sont utilisées dans un moteur dont le réglage est au point, pendant ***84*** mois peu importe le kilométrage effectué, ou selon l'intervalle de remplacement recommandé par le fabricant (indiqué dans le manuel du propriétaire), selon la dernière éventualité. Si pour quelque raison que ce soit vous n'êtes pas entièrement satisfait de la performance de vos bougies Champion Iridium durant la période de garantie prescrite, retournez simplement la ou les bougies accompagnées d'une preuve d'achat. Champion vous remboursera le prix d'achat de vos bougies.

Cette garantie exclut les véhicules utilisés à des fins commerciales (ex. : parcs de véhicules) ou pour des épreuves de performance.

NON-AUTOMOTIVE SPARK PLUG GUARANTEE

When installed in accordance with Champion recommendations, non-automotive Champion spark plugs will meet and/or exceed warranty requirements of all vehicle and engine manufacturers. Installation and use of Champion spark plugs will not void any manufacturer's vehicle or engine warranty.

GARANTIE SUR LES BOUGIES POUR USAGE NON AUTOMOBILE

Lorsqu'elles sont installées selon les recommandations de Champion, les bougies pour usage non automobile respectent ou surpassent les exigences de la garantie de tous les fabricants de véhicules et de moteurs. L'installation et l'utilisation des bougies Champion n'invalidera aucune des garanties offertes par les fabricants de véhicules et de moteurs.

GARANTÍA DE BUJÍAS NO AUTOMOTRICES

Cuando se instalan según las recomendaciones de Champion, las bujías no automotrices de Champion cumplirán o excederán los requisitos de garantía de todos los fabricantes de vehículos y motores. La instalación y el uso de las bujías Champion no anularán ninguna garantía del vehículo o motor del fabricante.

GLOW PLUG

** 30 DAY GUARANTEE*

Champion Spark Plug, a brand of Federal-Mogul, Motorparts, guarantees to consumer purchasers that Champion glow plugs meet and/or exceed original equipment specifications, and are guaranteed against material and workmanship for 30 days from the date of purchase. If for any reason you don't feel completely satisfied with the materials used or the workmanship of Champion glow plugs, return the plug(s) with proof of purchase to Champion Spark Plug and you will receive a refund at purchase price.

BOUGIES INCANDESCENTES

** GARANTIE DE 30 JOURS*

Champion Spark Plug, marque de commerce de Federal-Mogul Motorparts, garantit aux consommateurs que les bougies incandescentes Champion respectent ou surpassent les exigences de l'équipement d'origine, et qu'elles sont garanties contre tout défaut de matériaux et de fabrication pendant 30 jours à compter de la date d'achat. Si pour quelque raison que ce soit vous n'êtes pas entièrement satisfait des matériaux utilisés ou de la fabrication des bougies incandescentes Champion, retournez simplement la ou les bougies accompagnées de la preuve d'achat à Champion Spark Plug et l'on vous remboursera le prix d'achat.

BUJÍA INCANDESCENTE

**GARANTÍA DE 30 DÍAS*

Champion Spark Plug, una marca de Federal-Mogul Motorparts, garantiza a los compradores consumidores que las bujías incandescentes Champion cumplen o exceden las especificaciones de los equipos originales, y están garantizadas que no tienen defectos de material o mano de obra durante 30 días a partir de la fecha de compra. Si por cualquier razón no se siente completamente satisfecho con los materiales usados y la mano de obra de las bujías incandescentes Champion, devuelva las bujías con la prueba de compra a Champion Spark Plug y se le reembolsará el precio de compra.

INSTRUCTIONS FOR RETURN

If for any reason you don't feel completely satisfied with the performance of Champion spark plugs during the prescribed guarantee period:
Return plugs, proof of purchase and written explanation to:
Federal-Mogul Motorparts
Attn: Champion Guarantee
3168 Riverport Tech Center Drive
Maryland Heights, MO 63043
Champion Spark Plug and Federal-Mogul Corp. do not authorize its marketers or retailers to supply replacement or refund.

INSTRUCTIONS DE RETOUR

Si pour quelque raison que ce soit vous n'êtes pas entièrement satisfait de la performance des bougies Champion durant la période de garantie prescrite :
Retournez les bougies ainsi qu'une preuve d'achat et une explication par écrit à :
Federal-Mogul Motorparts
Attn: Champion Guarantee
3168 Riverport Tech Center Drive
Maryland Heights, MO 63043
Les agents de mise en marché et détaillants de Champion Spark Plug et Federal-Mogul Corp. ne sont aucunement autorisés à remplacer les produits ou à effectuer les remboursements.

INSTRUCCIONES PARA LA DEVOLUCIÓN

Si por cualquier razón no está satisfecho completamente con el rendimiento de las bujías Champion durante el período de garantía prescrito:
Envíe las bujías, prueba de compra y una explicación por escrita a:
Federal-Mogul Motorparts
Attn: Champion Guarantee
3168 Riverport Tech Center Drive
Maryland Heights, MO 63043
Champion Spark Plug y Federal-Mogul Corp. no autorizan a sus distribuidores o vendedores detallistas que suministren bujías de repuesto o reembolso.

* These guarantees do not extend to damages due to misuse, accident, abuse, neglect, improper installation or application. These guarantees are limited solely to the refund cost of the spark plugs and do not include the cost of labor for removal or installation.

* Ces garanties excluent les dommages causés par une mauvaise utilisation, un accident, un usage abusif, la négligence et une application ou une installation inappropriée. Ces garanties se limitent uniquement au remboursement du coût des bougies et excluent les frais de main-d'oeuvre pour la dépose ou l'installation.

* Estas garantías no cubren los daños debidos al uso indebido, accidente, abuso, negligencia, instalación o aplicación inadecuada. Estas garantías se limitan únicamente al costo de reembolso de las bujías y no incluyen el costo de la mano de obra para el desmontaje o instalación.

Ce protégé-aile de luxe est fait de vinyle résistant et facile à nettoyer. Cet article pratique est muni d'une pochette à outils coussinée et d'une bordure, et permet de garder les voitures des clients à l'abri des taches et des égratignures.

CT-600
Esta cubierta deluxe está hecha de vinilo resistente fácil de limpiar. Este componente de servicio útil tiene un reborde acolchado para herramientas y bordes recortados para no manchar ni rayar los automóviles de sus clientes.

SPARK PLUG INSTALLATION TOOL
OUTIL POUR INSTALLATION DE BOUGIES
HERRAMIENTA DE INSTALACIÓN DE BUJÍAS

CT-700
Accessing the plug bores on many of today's engines including automotive, small engine, agriculture and industrial can be very difficult, which adds time to the job and increases the chances of damaging the threads in the plug or cylinder head. This spark plug installation tool solves these challenges speeds the job in even the tightest engine spaces and helps prevent cross-threading of the plug and cylinder head.

The Champion spark plug installation tool (CT-700) is a 12-inch-long molded rubber adapter tapered ends that securely holds the spark plug as the user reaches into the engine compartment and threads the plug into the cylinder head. Once the plug is hand-tight in the bore, the tool can easily be pulled out so the user can complete the job with a torque wrench. The extremely affordable CT-700 tool can be used with virtually any size of spark plug. Sold in box of 20.

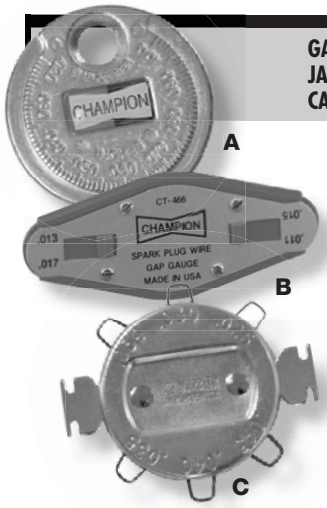

CT-700
Il peut être difficile d'avoir accès à l'alésage des bougies sur bon nombre de moteurs modernes, notamment les petits moteurs, les moteurs d'automobile, les moteurs de véhicules agricoles et les moteurs industriels, ce qui prolonge la durée de la réparation et augmente le risque d'endommager le filetage de la bougie ou de la culasse. Cet outil pour installation de bougies résout ces problèmes et rend la tâche plus facile, même sur les moteurs dont l'accès est très restreint, et prévient la déformation et l'arrachement des filets de la bougie et de la culasse.

L'outil pour installation de bougies Champion (CT-700) se compose d'un adaptateur en caoutchouc moulé de 12 pouces de long muni d'extrémités coniques qui maintiennent la bougie en place tandis que l'utilisateur visse la bougie dans la culasse à l'intérieur du compartiment moteur. Une fois que la bougie est serrée à la main dans l'alésage, il est facile de retirer l'outil de sorte que l'utilisateur puisse terminer le serrage au moyen d'une clé. Extrêmement abordable, cet outil CT-700 convient à presque tous les calibres de bougie. Vendu en boîtes de 20.

CT-700
El acceso a las perforaciones de las bujías en muchos de los motores actuales incluidos los motores automotrices, pequeños, agrícolas e industriales puede resultar muy difícil, lo que prolonga el trabajo y aumenta las posibilidades de dañar las roscas en la bujía o en la cabeza del cilindro. Esta herramienta de instalación de bujías resuelve estos retos, acelera el trabajo incluso en los espacios del motor más estrechos y ayuda a prevenir los daños en las roscas de la bujía y la cabeza del cilindro.

La herramienta de instalación de bujías Champion (CT-700) es un adaptador de goma moldeado de 12 pulgadas de largo con extremos cónicos que sujetan firmemente la bujía cuando el usuario introduce el brazo en el compartimiento del motor y enrosca la bujía en la cabeza del cilindro. Una vez que la bujía esté apretada en la perforación, la herramienta se puede extraer fácilmente de modo que el usuario pueda completar el trabajo con una llave dinamométrica. La extraordinariamente asequible herramienta CT-700 puede usarse con prácticamente cualquier tamaño de bujía.Se vende en cajas de 20 unidades.

GAP GAUGES
JAUGES D'ÉCARTEMENT
CALIBRES PARA SEPARACIÓN ENTRE PUNTAS

SILVER DOLLAR TAPER
A. CT-481
Circular taper gap gauge shows inch and millimeter ranging from .020 to .100" (0.6-2.4mm). Use only to measure, not to pry to adjust.

B. Retractable Fine Wire
CT-466, Reorder No. 94608

C. Spark Plug Gap Wire Gauge
CT-482 Gauge measures spark plug electrode gaps from 0.025 to 0.045" (0.635 to 1.143mm).
CT-483 Gauge measures spark plug electrode gaps on gap plus from 0.040 to 0.080" (1.016 to 2.032mm).

BOUGIES À SIÈGE CONIQUE CIRCULAIRE
A. CT-481
Jauge d'écartement à conicité circulaire en pouces et en milimètres de 0,020 po à 0,100 po (0,6 – 2,4 mm). Sert uniquement à mesurer — ne pas s'en servir comme levier pour effectuer le réglage.

B. Bougies à fil fin escamotable CT-466, n° de pièce 94608

C. Jauge d'épaisseur à fils pour bougies
CT-482 Jauge pour mesurer l'écartement des électrodes de bougie de 0,025 po à 0,045 po (0,635 mm à 1,143 mm).
CT-483 Jauge pour mesurer l'écartement des électrodes de bougie de 0,040 po à 0,080 po (1,016 mm à 2,032 mm).

CALIBRADOR DE CONICIDAD CIRCULAR
A. CT-481
Calibrador de conicidad circular para separación entre puntas que mide distancias en pulgadas y milímetros que oscilan entre 0,020" y 0,100" (0,6 – 2,4 mm). Use solamente para medir, no para apalancar con el fin de ajustar.

B. Cable fino retráctil CT-466, N° de pieza 94608

C. Calibrador de alambre para separaciones entre electrodos de bujías
CT-482 GEl calibre mide las separaciones entre electrodos de las bujías de 0.025 a 0.045" (0.635 a 1.143mm).
CT-483 El calibre mide las separaciones entre los electrodos de las bujías de 0.040"a 0.080" (1.016 a 2.032mm).

SPARK PLUG INSPECTION TRAY & VIEWER
PLATEAU D'INSPECTION ET VISUALISATEUR DE BOUGIES
BANDEJA Y VISOR DE INSPECCIÓN DE BUJÍAS

CT-500
Viewing spark plugs has never been more convenient or easier. This sturdy steel plug tray holds up to eight plugs and is constructed to last through years of use.

CT-500
L'examen des bougies n'a jamais été aussi facile et pratique. Ce plateau en acier robuste peut contenir jusqu'à huit bougies et est conçu pour durer des années.

CT-500
Nunca ha sido tan conveniente o fácil inspeccionar bujías. Esta bandeja fuerte de acero para bujías contiene hasta ocho bujías y dura muchos años.

Champion performance additives & lubricants are formulated to give your customers' vehicles peak performance and years of trouble-free operation.

Les additifs et lubrifiants Champion sont formulés pour rétablir la performance optimale des véhicules de vos clients et leur offrir des années de fonctionnement sans problèmes.

Los aditivos y lubricantes de rendimiento Champion están formulados para dar a los vehículos de sus clientes un rendimiento máximo y años de funcionamiento sin problemas.

#4951I (US) #5951IC (CDN)

COMPLETE FUEL SYSTEM CLEANER™
LIKE A TUNE-UP IN YOUR TANK™

- Cleans and protects complete fuel system
- Removes combustion chamber deposits
- Restores fuel economy and lost power
- Treats up to 21 gallons
- 16-oz./473mL bottle
- Case Qty. 8

- Nettoie et protège l'intégralité du circuit d'alimentation
- Élimine les dépôts dans les chambres de combustion
- Rétablit la consommation de carburant et la puissance d'origine
- Traite jusqu'à 79,5 L (21 gal)
- Bouteille de 473 ml/16 oz
- Qté/caisse : 8

- Limpia y protege el sistema de combustible completo
- Elimina los depósitos de la cámara de combustión
- Restablece el menor consumo de combustible y la potencia perdida
- Trata hasta 21 galones
- Botella de 16 onzas/473 mL
- Cantidad por caja 8

#4952I (US) #5952IC (CDN)

OCTANE BOOSTER™
BOOSTS UP TO 15 POINTS!™

- With MMT™ Power Boost
- Stops engine knock and rough idle
- Increases fuel efficiency
- Boosts acceleration
- 16-oz./473mL bottle
- Case Qty. 8

- Avec antidétonant MMT™
- Met fin aux détonations et au ralenti irrégulier du moteur
- Accroît le rendement du carburant
- Améliore l'accélération
- Bouteille de 473 ml/16 oz
- Qté/caisse : 8

- Con refuerzo de potencia MMT™
- Elimina las detonaciones del motor y el ralentí irregular
- Aumenta la eficiencia de combustible
- Refuerza la aceleración
- Botella de 16 onzas/473 mL
- Cantidad por caja 8

#4953I (US) #5953IC (CDN)

ENGINE PROTECTANT OIL TREATMENT™
ADVANCED TIME-RELEASE FORMULA™

- Maximum engine wear protection
- Extends oil viscosity life
- Keeps engine cleaner — longer
- 16-oz./473mL bottle
- Case Qty. 8

- Offre au moteur une protection maximale contre l'usure
- Préserve la viscosité de l'huile plus longtemps
- Garde le moteur plus propre, plus longtemps
- Bouteille de 473 ml/16 oz
- Qté/caisse : 8

- Máxima protección de desgaste del motor
- Prolonga la duración de la viscosidad de aceite
- Mantiene el motor más limpio — más tiempo
- Botella de 16 onza/473 mL
- Cantidad por caja. 8

#4955I (US) #5955IC (CDN)

DIESEL FUEL CONDITIONER/ANTIGEL™
IMPROVES FUEL PERFORMANCE™

- Improves cold flow/prevents freezing
- Cleans fuel system
- 16-oz./473mL bottle
- Case Qty. 8

- Améliore le débit de carburant par temps froid et en prévient le gel
- Nettoie le circuit d'alimentation
- Bouteille de 473 ml/16 oz
- Qté/caisse : 8

- Mejora el flujo en frío/impide la congelación
- Limpia el sistema de combustible
- Botella de 16 onzas/473 mL
- Cantidad por caja 8

#4901K (US) #5901KC (CDN)

Super Concentrated Fuel Injector Cleaner™
Restores Power and Performance™

- Unclogs fuel injectors
- Reduces stalling, rough idle and knocks
- 12-oz./354mL bottle
- Case Qty. 8

- Débloque les injecteurs obstrués
- Réduit le calage, le ralenti irrégulier et les détonations du moteur
- Bouteille de 354 ml/12 oz
- Qté/caisse : 8

- Desatasca los inyectores de combustible
- Reduce el calado, el ralentí irregular y las detonaciones
- Botella de 12 onzas/354 mL
- Cantidad por caja 8

#4954I (US) #5954IC (CDN)

Truck/SUV Super Concentrated Fuel Injector Cleaner™
Formulated for Hard Working Engines™

- Cleans and protects complete fuel system (carburetor, injectors and intake valves)
- Targets hardened fuel deposits in large engines
- Treats up to 40 gallons
- 16-oz./473mL bottle
- Case Qty. 8

- Nettoie et protège l'intégralité du circuit d'alimentation (carburateur, injecteurs et soupapes d'admission)
- Cible les dépôts de carburant durcis dans les gros moteurs
- Traite jusqu'à 151 L (40 gal)
- Bouteille de 473 ml/16 oz
- Qté/caisse : 8

- Limpia y protege todo el sistema de combustible (carburador, inyectores y válvulas de admisión)
- Se usa para depósitos de combustible endurecidos en motores grandes
- Trata hasta 40 galones
- Botella de 16 onzas/473 mL
- Cantidad por caja 8

#4900K (US) #5900KC (CDN)

Power Steering Fluid™
PLUS Stop Leak!™

- Meets service requirements of GM, Chrysler, Ford, Honda and most other foreign makes
- Maximizes power steering life
- 12-oz./354mL bottle
- Case Qty. 8

- Répond aux exigences d'entretien de GM, Chrysler, Ford, Honda et de la plupart des marques étrangères
- Maximise la durée de vie de la servodirection
- Bouteille de 354 ml/12 oz
- Qté/caisse : 8

- Cumple los requisitos de servicio de GM, Chrysler, Ford, Honda y la mayoría de otras marcas extranjeras
- Aumenta al máximo la duración de la servodirección
- Botella de 12 onzas/354 mL
- Cantidad por caja 8

#4998I (US) #5998IC (CDN)

Chain Lube Multi-Purpose Spray Grease™
Waterproof Lubricant™

- Multi-purpose spray grease
- Repels water and resists heat deterioration
- Provides superior protection against corrosion and friction
- 14-oz./397-grams spray can
- Case Qty. 12

- Graisse à usages multiples en aérosol
- Repousse l'eau et résiste à la détérioration causée parla chaleur
- Offre une protection supérieure contre la corrosion et la friction
- Canette aérosol de 397 g/14 oz
- Qté/caisse : 12

- Grasa rociado multifunción
- Repele el agua y resiste el deterioro térmico
- Proporciona una protección superior contra la corrosión y la fricción
- Lata de rociado de 14 onzas/397 gramos
- Cantidad por caja 12

ONE-PIECE SPARK PLUG FOR FORD ENGINES

#7989 Champion Double Platinum Power™ Plug Solves Chronic Tune-up Issue

The OE two-piece"high thread" style spark plug used in millions of 4.6L, 5.4L and 6.8L engines is prone to replacement challenges due to separation during removal, leaving the base trapped within the cylinder head. Champion Double Platinum Power™ plugs solve the problem with a one-piece design that eliminates the potential engine tuning headache affecting these engines, and makes replacement convenient and trouble free.

The Challenge:

OE Plug

- Two-piece design
- Prone to separation during removal

Champion Technology:

#7989

- One-piece design
- Superior durability
- Trouble free plug replacement

BOUGIE À CULOT MONOPIÈCE POUR MOTEURS FORD

La bougie Champion Double Platinum Power^MC nº 7989 vient résoudre un problème chronique de mise au point

La bougie d'origine en deux pièces de type « high-thread » qui équipe des millions de moteurs 4,6 L, 5,4 L et 6,8 L pose souvent des problèmes au moment du remplacement; les deux pièces se séparent et la base reste coincée dans la culasse. Les bougies Champion Double Platinum Power^MC viennent résoudre ce problème grâce à une conception monopièce qui élimine les problèmes potentiels de mise au point de ces moteurs, rendant le remplacement aussi pratique que facile.

Le défi :

Bougie d'origine

- Conception en deux pièces
- Sujette à la séparation au moment de la dépose

Technologie Champion :

Nº 7989

- Conception monopièce
- Durabilité supérieure
- Remplacement facile et sans problème

BUJÍA DE UNA PIEZA PARA MOTORES FORD

La bujía Double Platinum Power™ de Champion No. 7989 resuelve el problema de afinado crónico

La bujía original de dos piezas de "rosca larga" usadas en millones de motores de 4.6 L, 5.4 L y 6.8 L tiende a presentar retos de reemplazo debido a la separación durante la retirada, dejando la base atrapada dentro de la culata. Las bujías Double Platinum Power™ de Champion resuelven el problema con un diseño de una pieza que elimina el potencial problema de afinado del motor que afecta a estos motores, y hace que el reemplazo sea conveniente y sin problemas.

El reto:

Bujía original

- Diseño de dos piezas
- Tiende a separarse durante la retirada

Tecnología Champion:

No. 7989

- Diseño de una pieza
- Durabilidad superior
- Reemplazo de bujías sin problemas
